ACCT 101: Financial Statement Analysis

Session 11

Dr. Richard M. Crowley

Frontmatter

Learning objectives

- Learn about Financial Statement analysis
- 2. Calculate and interpret financial ratios

Financial statement analysis

What matters?

- 1. The business environment
 - Economy health
 - Other countries (particularly for multinational firms)
 - Industry demand
 - Resource scarcity or supplier concentration
 - Consumer concentration

What matters?

- 2. Historical financials
 - Financial statements and notes
 - Competitors statements

https://goo.gl/Tq46T6

What matters?

- 3. Historical non-financials
 - Governance, Risk disclosures, Audit report
 - Shareholders, supplier relationships

https://goo.gl/M2PyZ4

https://goo.gl/wFFRro

Predicting firm value

- 1. Trend analysis (a.k.a. Horizontal analysis)
 - Compare dollar and percent changes across years
- 2. Common size financial statements (a.k.a. Vertical analysis)
 - Compare financials across years or firms
 - A subset of ratio analysis
- 3. Ratio analysis
- 4. Analytics

Only ratio analysis is on the final – we'll cover the others briefly.

Trend analysis

What is it?

- Comparing different years or quarters of data to see the trend in measures.
- Examples:
 - Revenue grew by 3% this year
 - Net income grew by 4% this quarter
 - Quarterly revenue decreased 2% year over year

Examples

Nike Rides Out its #MeToo Moment, WSJ

That is a reflection of a strong quarter: Nike reported earnings of 68 cents a share, beating analysts' estimates by 15 cents, and *grew revenue by 7%*.

 China's Tencent Invests in Video, AI and Mobile Payments, as Earnings Soar, WSJ

The plans emerged as the Shenzhen-based company said its *fourth-quarter revenue grew 51% year over year* to 66.4 billion yuan (\$10.2 billion), boosted by strong growth in mobile payments, digital content subscriptions and advertising on its flagship mobile social apps, WeChat and QQ.

How to do it

- 1. Get 2 financial statements from the same company (typically the income statement)
- 2. Find the percentage change from the old figures to the new figures

Microso Partial Income S In Millions of	Statement			
Year ended June 30,	2017	2016		
Revenue				
Product	51,190	61,502	\Rightarrow	17% decrease
Service	32,760	23,818	\Rightarrow	38% increase
Total revenue	89,950	85,320	\Rightarrow	5.4% increase
Total cost of revenue	34,261	32,780	\Rightarrow	4.5% increase
Gross margin	55,689	52,540	\Rightarrow	6.0% increase
Research and development	13,037	11,988	\Rightarrow	8.8% increase
Sales and marketing	15,539	14,697	\Rightarrow	5.7% increase
Net income	21,204	16,798	\Rightarrow	26% increase

Common-size financial statements

What is it?

- Standardizing figures in a financial statement by dividing by another figure.
- Allows for comparing finanical statements accross companies
- Ex.:
 - Divide an income statement by revenue
 - $ullet rac{Gross \; profit}{Revenue} = Gross \; Margin$
 - $extstyle rac{Net\ income}{Revenue} = Profit\ Margin$
 - Divide financial statements by total assets

Examples

Cheerios Could Get Pricier as General Mills Faces Rising Costs, WSJ

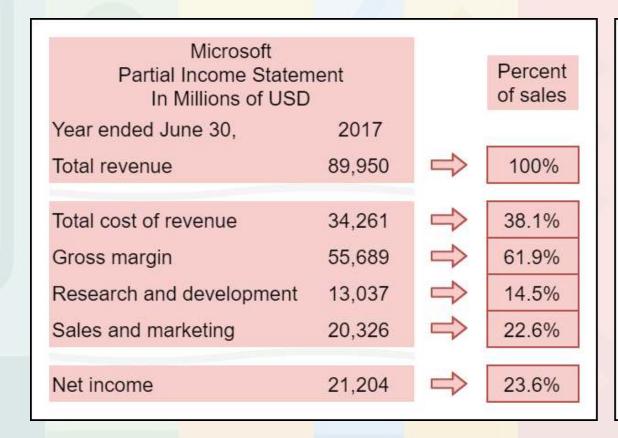

Fourteen of the last 15 packaged food makers to [report] earnings posted lower-than-expected gross margins, said J.P. Morgan analyst Ken Goldman.

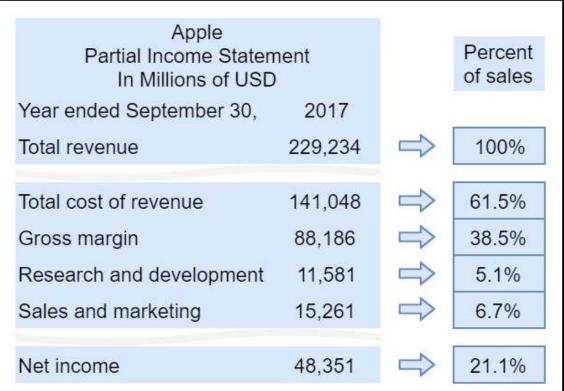

Ford CEO Says Company Could Exceed 8% Margin Target, WSJ

The company is forecasting an 8% global profit margin by about 2022, a number that would put it closer to better-performing peers, including GM. Ford's 5% operating margin last year was disappointing...

How to do it

- 1. Get a financial statement
- 2. Divide every number by the same amount (sales, total assets, etc.) to get the percent (of sales, of assets, etc.)

We can compare accross companies or years

Balance sheet ratios

What is ratio analysis?

 Using various ratios of numbers from financial statements to better understand companies

All examples use the following data

Microsoft Partial Income Statement In millions of USD					
Year ended June 30,	2017	2016			
Revenue					
Product	51,190	61,502			
Service	32,760	23,818			
Total revenue	89,950	85,320			
Total cost of revenue (COGS)	34,261	32,780			
Gross margin	55,689	52,540			
Research and development	13,037	11,988			
Sales and marketing	15,539	14,697			
Operating income	22,326	20,182			
Interest expense	2,222	1,243			
Net income	21,204	16,798			
	2.,20.	10,100			

Microsoft Partial Balance Sheet In millions of USD					
2017	2016				
7,663	6,510				
125,318	106,730				
19,792	18,277				
2,181	2,251				
159,851	139,660				
241,086	193,468				
7,390	6,898				
64,527	59,357				
168,692	121,471				
72,394	71,997				
	ce Sheet of USD 2017 7,663 125,318 19,792 2,181 159,851 241,086 7,390 64,527 168,692				

MSFT Stock Quotes (price in USD, shares in millions, dividends paid in millions of USD)					
June 30,	2017	2016			
Price	68.93	51.17			
Shares	7,708	7,808			
Dividend paid	12,040	11,329			

Caveats

- 1. There are a few differences between the ratios in these slides and in the book. These differences are due to simplifications I have made you can use these ratios on the final instead of the book's ratios without penalty.
- 2. Some ratios have many definitions. If you look online, you may find other definitions for some of these ratios. Don't use those on the final.

Inventory turnover

 $\frac{1}{2}(Inventory_T + Inventory_{T-1})$

- How many times per year a company sells its inventory on hand
- A similar measure is Inventory resident period
 - A.k.a. Number of days' sales in inventory
 - Calculated as $\frac{365}{Inventory\ turnover}$
 - The number of days it take to sell the company's inventory

Microsoft's 2017 inv. turnover:
$$\frac{34,261}{\frac{1}{2}(2,181+2,251)}=15.46$$

Microsoft's 2017 inv. period: $\frac{365}{15.46}=23.6~days$

Accounts receivable turnover

$$rac{Revenue}{rac{1}{2}(A/R_T+A/R_{T-1})}$$

- How many times per year a company collects its A/R on hand
- A similar measure is Receivable collection period
 - A.k.a. Number of days' sales in receivables
 - $\quad \textbf{Calculated as } \frac{365}{Accounts \ receivable \ turnover}$
 - The number of days it take to collect the company's A/R

Microsoft's 2017 A/R turnover:
$$\frac{89,950}{\frac{1}{2}(19,792+18,277)}=4.73$$

Microsoft's 2017 A/R period: $\frac{365}{4.73}=77.2~days$

Payable turnover

$$rac{COGS}{rac{1}{2}(A/P_T+A/P_{T-1})}$$

- How many times per year a company pays its A/P it owes
- A similar measure is Payable outstanding period
 - Calculated as $\frac{365}{Payable\ turnover}$
 - The number of days it take to pay the company's A/P

Microsoft's 2017 A/P turnover:
$$\frac{34,261}{\frac{1}{2}(7,390+6,898)}=4.80$$

Microsoft's 2017 A/P period: $\frac{365}{4.80}=76.1~days$

Cash conversion cycle

$$\frac{365}{Inventory\ turnover} + \frac{365}{A/R\ turnover} - \frac{365}{A/P\ turnover}$$
 \updownarrow

 $Receivable\ collection\ period+Inventory\ resident\ period-Payable\ outstanding\ period$

- Measures how long it takes to convert inventory to cash, less time to pay payables
 - Time from paying for inventory to getting cash on sale
- Can calculate from turnover ratios or periods

Microsoft's 2017 cash conversion cycle:

$$23.6 + 77.2 - 76.1 = 24.7 \ days$$

Current ratio

 $\frac{Current\ assets}{Current\ liabilities}$

- Measures a company's ability to pay current liabilities
- ullet This should usually be >2

Microsoft's 2017 current ratio: $\frac{159,851}{64,527}=2.48$

Quick ratio

 $\frac{Cash + Short\ term\ investments + A/R}{Current\ liabilities}$

- A.k.a. acid-test ratio
- Measures a company's ability to pay current liabilities
 - Only factors in liquid current assets
- This should be > 1

Microsoft's 2017 quick ratio: $\frac{7,663+125,318+19,792}{64,527}=2.37$

Debt ratio

 $\frac{Total\ liabilities}{Total\ assets}$

- A.k.a. Debt to assets ratio
- Measures a company's leverage
 - Leverage = how much the company is financed by debt
- Higher = more leverage = more debt financing

Microsoft's 2017 debt ratio: $\frac{168,692}{241,086} = 70.0\%$

Times-interest-earned ratio

 $\frac{Income\ from\ operations}{Interest\ expense}$

- Measures a company's ability to cover interest payments
- Higher is better, < 1 should cause some worry

Microsoft's 2017 times-interest-earned ratio:

$$\frac{22,326}{2,222} = 10.05$$

Practice

Calculate the following ratios for Microsoft in 2016

- Payable outstanding period
- Quick ratio
- Debt ratio
- Times-interest-earned ratio

Extra info: Microsoft's A/P in 2015 was \$6,591M

Income statement ratios

Profit Margin

$$rac{Profit}{Revenue}$$

- Gross profit margin tells you about the company's selling margins
- Operating profit margin tells you about its operating efficiency
- Net profit margin tells you about its overall profitability

Microsoft's 2017 gross profit margin: $\frac{55,689}{89,950}=61.9\%$

Microsoft's 2017 operating profit margin: $rac{22,326}{89,950}=24.8\%$

Microsoft's 2017 net profit margin: $rac{21,204}{89,950}=23.6\%$

Return on assets (ROA)

$$rac{Net\ income}{rac{1}{2}(Assets_T + Assets_{T-1})}$$

- Measures overall profitability based on the company's size
- Very common measure in practice
- Higher is better

Microsoft's 2017 ROA:
$$\frac{21,204}{\frac{1}{2}(241,086+193,468))}=9.76\%$$

Return on equity (ROE)

$$rac{Net\ income}{rac{1}{2}(Equity_T+Equity_{T-1})}$$

- Measures overall profitability based on the company's size
 - Stockholder focussed
- Very common measure in practice
- Higher is better

Microsoft's 2017 ROE:
$$\frac{21,204}{\frac{1}{2}(72,394+71,997))}=29.4\%$$

Practice

Calculate the following ratios for Microsoft in 2016

- Net profit margin
- Return on assets (ROA)
- Return on equity (ROE)

Extra info: Microsoft's 2015 total assets was \$176,223M and Microsoft's 2015 total equity was \$80,083M

Equity ratios

Earnings per share (EPS)

$$rac{Net\ income-Dividends\ on\ pref.\ shares}{rac{1}{2}(\#Shares_T+\#Shares_{T-1})}$$

- Measures the amount of profit tied to each share of stock
- Very common measure in practice
- ullet Assume shares in year T and T-1 are the same if not stated
- Very easily manipulated

Microsoft's 2017 EPS:
$$\frac{21,204}{\frac{1}{2}(7,708+7,808))}=\$2.73/share$$

Price/earnings ratio (P/E ratio)

$$rac{Stock\ price}{EPS}$$

- A measure of if a stock is overpriced
- 6 to 8 is common, 20+ is common for tech firms
 - Higher = overpriced
 - Lower = underpriced
- Very common measure in practice
- Very easily manipulated, since EPS is easily manipulated

Microsoft's 2017 P/E ratio: $\frac{68.93}{2.73}=25.2$

Dividend yield

 $\frac{Dividends\;per\;share}{Share\;price}$

- Measures return from dividends relative to investment amount
- Useful for investing when trying to maximize cashflow
- Rarely calculated by hand

Microsoft's 2017 dividend yield: $\frac{12,040/7,708}{68.93} = 2.27\%$

Book to market

This is a twist on "Book value per share" from the book, but is much more useful

$$\frac{Total\ equity}{Share\ price \times \#Shares}$$

- Measures the extent to which a company is perceived as a growth firm
 - Lower = growth firm
 - Higher = mature firm
 - Or illiquid firm (no one trades it...)

Microsoft's 2017 book to market ratio: $\frac{72,394}{68.93 imes 7,708} = 0.14$

Practice

Calculate the following ratios for Microsoft in 2016

- EPS
- P/E Ratio
- Book to market

Extra info: Microsoft's 2015 outstanding shares was 8,027M

Equations

Balance sheet ratio equations

$$Inventory \ turnover = \frac{COGS}{\frac{1}{2}(Inventory_T + Inventory_{T-1})}$$

$$A/R \ turnover = \frac{Revenue}{\frac{1}{2}(A/R_T + A/R_{T-1})}$$

$$A/P \ turnover = \frac{COGS}{\frac{1}{2}(A/P_T + A/P_{T-1})}$$

$$Cash \ conversion \ cyle = \frac{365}{Inv. \ turnover} + \frac{365}{A/R \ turnover} - \frac{365}{A/P \ turnover}$$

$$Current \ ratio = \frac{Current \ assets}{Current \ liabilities}$$

$$Quick \ ratio = \frac{Cash + Short \ term \ investments + A/R}{Current \ liabilities}$$

$$Debt \ ratio = \frac{Total \ liabilities}{Total \ assets}$$

$$Times-interest-earned = \frac{Income \ from \ operations}{Interest \ expense}$$

Income statement ratio equations

 $egin{align*} & ext{Gross profit} \ & ext{Revenue} \ & ext{Operating profit} \ & ext{Revenue} \ & ext{Net profit margin} = rac{Operating profit}{Revenue} \ & ext{Net income} \ & ext{Revenue} \ & ext{Revenue} \ & ext{Revenue} \ & ext{Revenue} \ & ext{Net income} \ & ext{Net income} \ & ext{Return on equity (ROE)} = rac{Net income}{rac{1}{2}(Equity_T + Equity_{T-1})} \ & ext{Net income} \$

Equity ratio equations

Earnings per share (EPS) = $\frac{Net \ income - Dividends \ on \ pref. \ shares}{\frac{1}{2}(\#Shares_T + \#Shares_{T-1})}$ $Price/earnings \ ratio \ (P/E) = \frac{Stock \ price}{EPS}$ $Dividend \ yield = \frac{Dividends \ per \ share}{Share \ price}$ $Book \ to \ market = \frac{Total \ equity}{Share \ price \times \#Shares}$

Background

This is a quick preview of a new module called "Forecasting and Forensic Analytics," part of the new Analytics major in SOA

 You don't need to know this for this class, but the techniques covered here are becoming more and more important

Revenue prediction

Predicting ROA for tech companies using prior year data
