ACCT 101: Control Systems

Session 4

Dr. Richard M. Crowley

Homework 1 Review

- Closing entries
 - Accounts are: Revenues, Expenses, Gains, Losses, Dividends
- Depreciation
 - (Price paid salvage value) / [life length from purchase]
 - In homework: (100,000 20,000) / 5 = 16,000
- Accrual entries:
 - 1. Bring an expense or revenue forward
 - 2. Create a payable or receivable as well
 - 3. Payable or receivable reversed upon payment

Example: Acc	<mark>rua</mark> ls and subs <mark>equent paymer</mark>	nt			
Date	Account		DR	CR	
20YY.12.31	Utilities expense		200		
	Utilities payable			200	
1/2 month of u	npaid utilities expense, estimate	d usage is \$2	200		Reverse payable
20YZ.01.15	Utilities payable		200	<	
	Utilities expense		300	<	Part not accrued before
	Cash			500	←
Received and paid utilities bill of \$500					From bill amount
				_	From bill amount

Quiz details

- Like the practice quiz on eLearn, except 60 minutes
- What can be covered:
 - Everything in the session 1 to 4 slides, except:

On the quiz

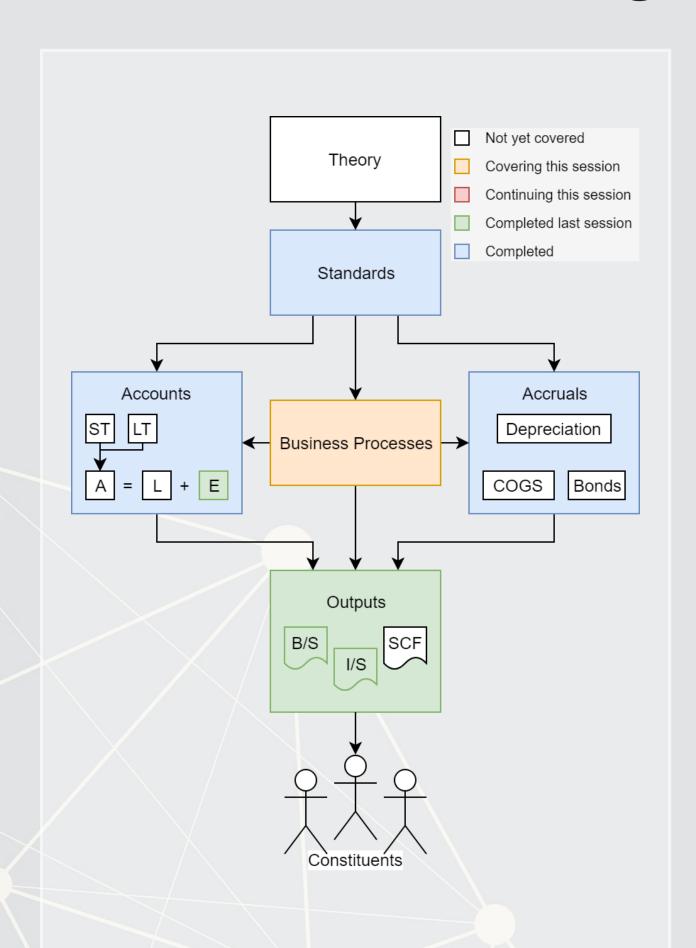

- Par value accounting for equity
- Concept names and definitions
 - Matching principle, periodicity, etc.

On the final

 Par value accounting for equity

The quiz is to makes sure you have the fundamentals down

Learning objectives

Control Systems (Chapter 4)

- 1. Understand the drivers of fraud
- 2. Be able to identify weaknesses in firms' systems and suggest improvements
- 3. Be able to reconcile book and bank cash

A/R (Chapter 5)

1. Understand how to write off uncollectible A/R

Misreporting: A simple definition

Errors that affect firms' accounting statements or disclosures which were done seemingly *intentionally* by management or other employees at the firm.

Traditional accounting fraud

- 1. A company is underperforming
- 2. Management cooks up some scheme to increase earnings
 - Wells Fargo (2011-2018?)
 - Fake/duplicate customers and transactions
- 3. Create accounting statements using the fake information

Other accounting fraud types

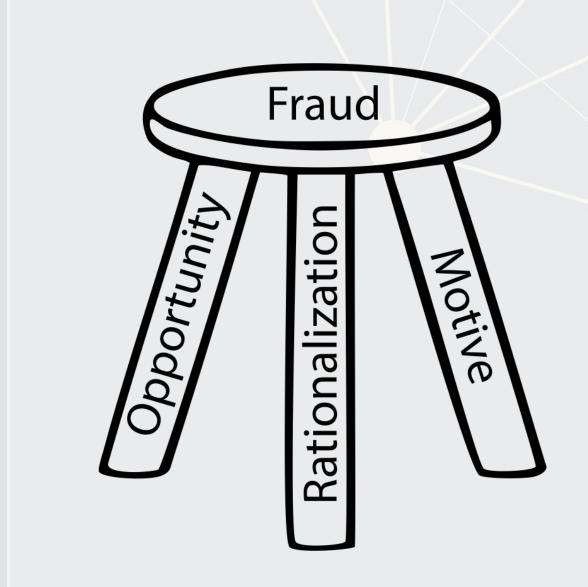

- Dell (2002-2007)
 - Cookie jar reserve (secret payments by Intel of up to 76% of quarterly income)
 - 1. The company is overperforming
 - 2. "Save up" excess performance for a rainy day
 - 3. Recognize revenue/earnings when needed to hit future targets
- Apple (2001)
 - Options backdating
- China North East Petroleum Holdings Limited
 - Related party transactions (transferring 59M USD from the firm to family members over 176 transactions)
- CVS (2000)
 - Improper accounting treatments (Not using mark-to-market accounting to fair value stuffed animal inventories)
- Countryland Wellness Resorts, Inc. (1997-2000)

Fraud in Singapore

- Keppel O&M
 - \$55M USD bribery in Brazil for contracts
 - Highly profitable, until fines rolled in
 - Profit of \$351.8M USD
 - Fines of \$422M USD (to US, Brazil, Singapore) [so far]
 - 6 employees implicated
 - 1 Keppel lawyer pleaded guilty in USA for drafting bribery contracts
- Keppel Club
 - Employees created 1,280 fake memberships, sold them, and retained all profits
 - \$37.5M from June 1 to August 1, 2014
- Asia Pacific Breweries (Chia Teck Leng)
 - Forged documents from 1999 to 2003 to obtain \$117M from 4 banks
 - To fund gambling addiction
 - 42 year jail sentence

Fraud triangle

- Opportunity
 - Hole in the control system
 - Profitably exploitable
- Rationalization
 - Resentment of corporation
 - Poor culture
 - "Borrowing"
- Motivation
 - Family needs
 - Maintaining lifestyle
 - Maintaining performance

Need all 3 for fraud to happen

Control Systems

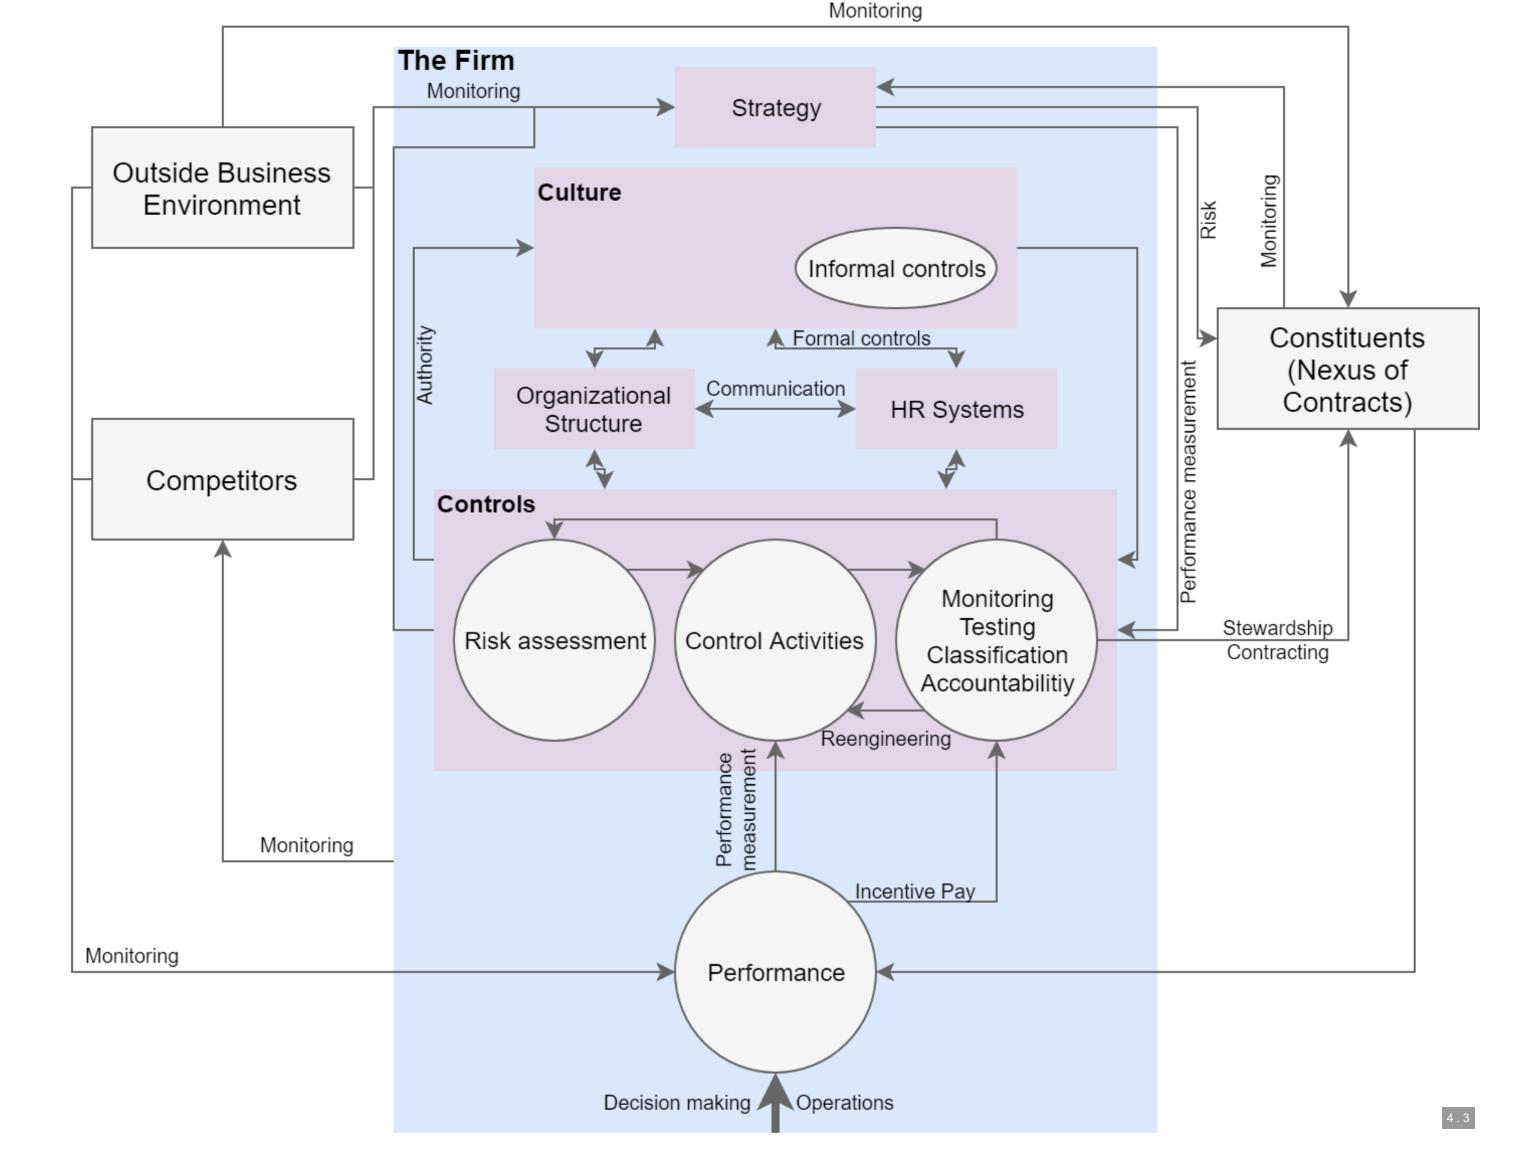

Systems

- Each part of the company is dependent on other parts
- Consider how all parts work together

Simplest case is a linear assembly line

- Pass the product from one stop to the next until it's done
- Except for...
 - Maintenance
 - Input selection
 - Product mix
 - Quality control
 - •
- Where does information flow?

Basic goals of control systems

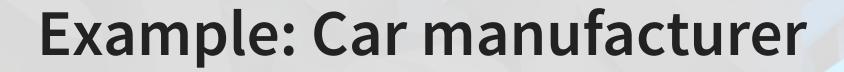

- Prevention
 - Make sure something doesn't go wrong
 - Ex.: Inspect raw materials before assembly
- Detection
 - Check if something went wrong
 - Ex.: Check products randomly after assembly
- Correction
 - Something went wrong, so we need to fix it
 - Ex.: Determine cause of defects & learn from problems

Basic mechanisms/solutions

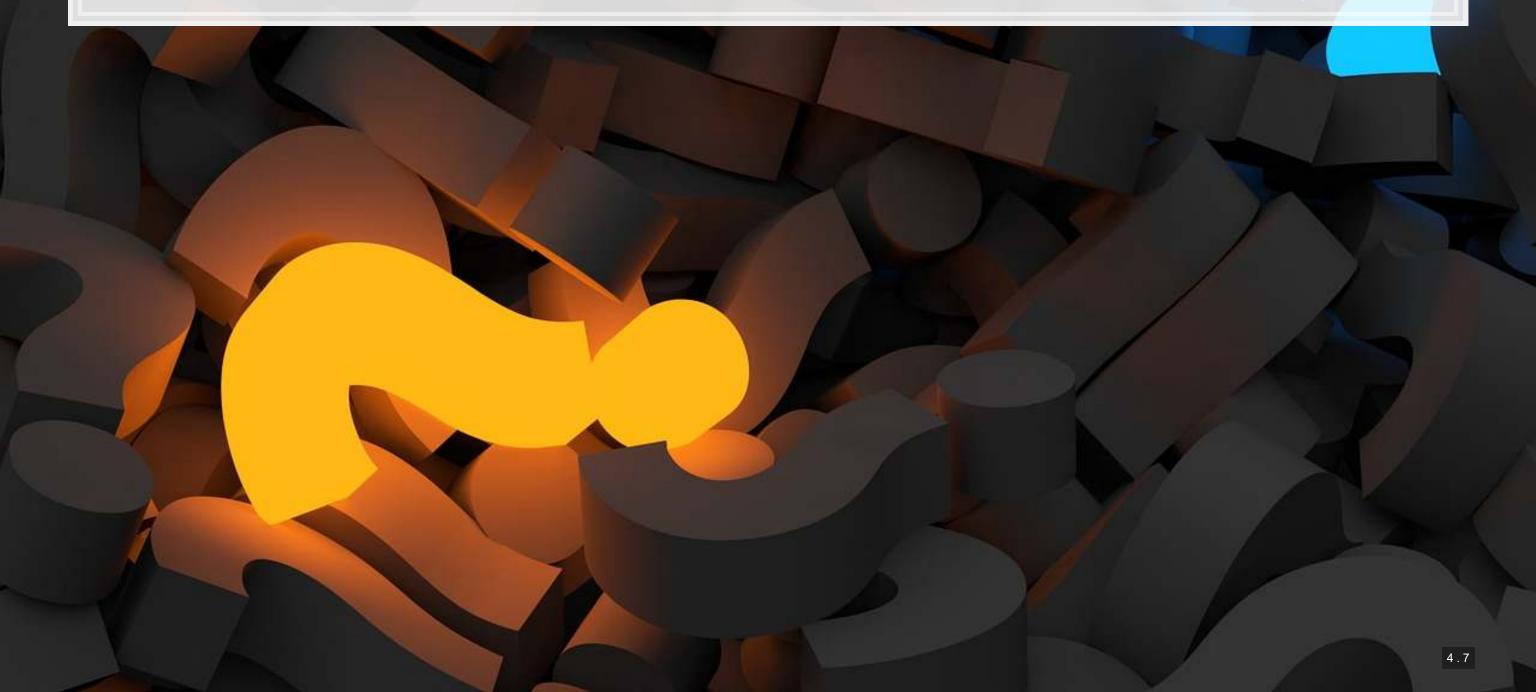

- Separation of duties
 - Different parts of a system are handled by different employees
 - Ex.: Inspection not done by assembly line worker
- Monitoring
 - Check if things are normal
 - Ex.: Boss stops by every now and then
- Limited access
 - Employees only have access to what they need
 - Ex.: Line workers can't access inventory records
 - Ex.: Raw material purchasers can't access salary records
- Approvals
 - Require oversight for some actions
 - Ex.: Buying from a new vendor may require boss's signature

Limitations

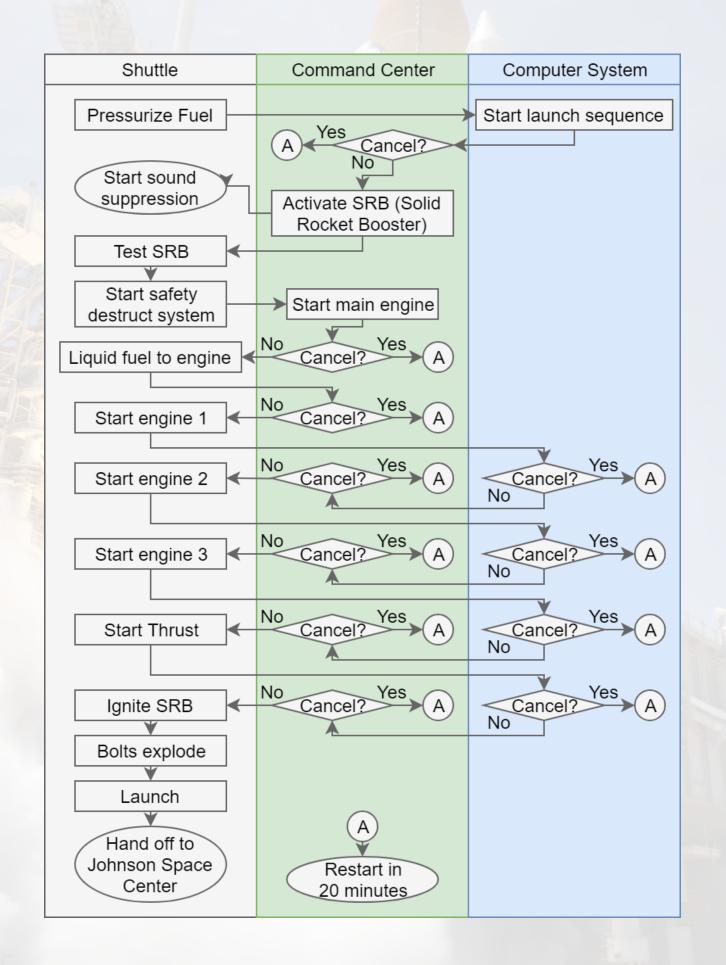

- Collusion
 - Multiple people can jointly subvert systems
- Fatigue
 - People are not perfect
- Negligence
 - Not every employee does what they are supposed to

- How would we control car quality?
 - Prevention
 - Detection
 - Correction

NASA Shuttle launch control system

Champaign Parking Enforcement

Champaign Parking Enforcement

Their Objectives

- 1. *Validity*: All recorded transactions ocurred
- Completeness: All valid transactions have been recorded
- 3. *Valuation*: Amounts measured properly
- 4. Security: Information system protected from unauthorized access or destruction

Discussion questions

- What are some risks that threaten these objectives?
 - How frequent is the risk?
 - How serious is the risk?
- How could they be addressed?

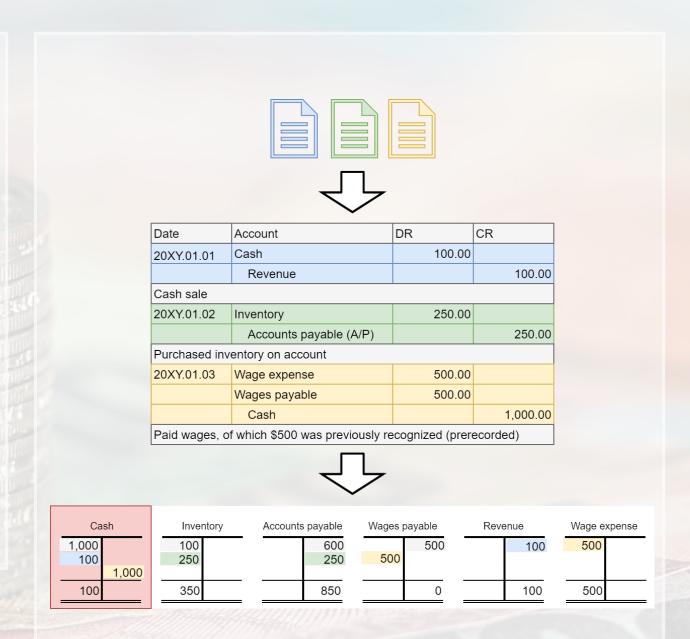

Cash reconciliation

Cash on companies' books

Documents:

- Purchase orders
- Invoices for purchases/sales
- Checks
- Payment records
- Petty cash
 - Small amount set aside for small purchases

Cash in the bank

Documents:

- Cash deposits, withdrawals
- Checks
- Electronic checks
 - EFT, ACH, GIRO, etc.
- Bank interest and fees
- Nonsufficient funds
 - Customer's check is rejected
 - Check writer didn't have enough cash in the bank

The Bank 1234 Bank Street Singapore, 123456

Statement, January 4, 20XY

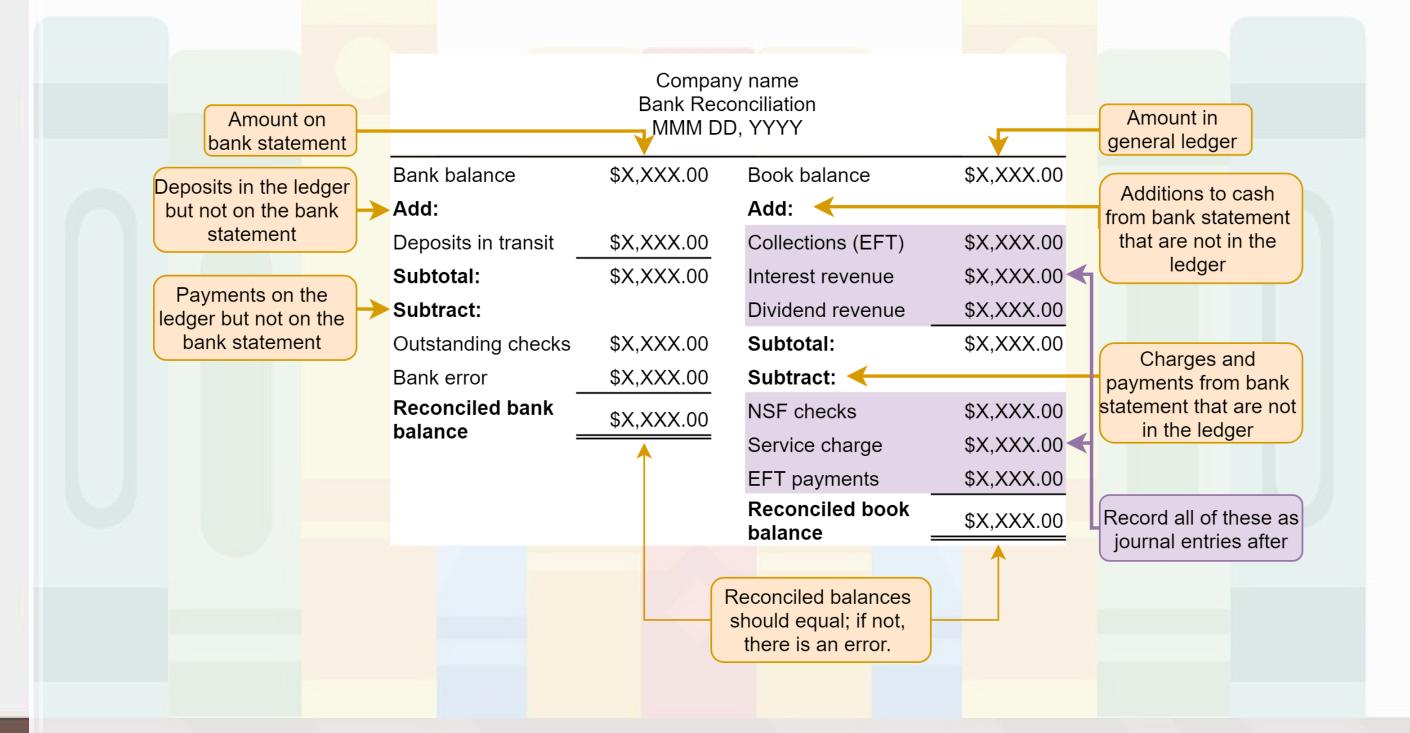

Checking account

Posting	Transaction	Debits	Credits	Balance
Jan 1	Beginning balance			1000.00
Jan 3	Check 3000		1000.00	0.00
Jan 3	EFT: Coffee club	300.00		300.00
Jan 4	Check fees		10.00	290.00
Jan 4	Interest earned (1%)	2.90		292.90

Inconsistencies between cash records

- The two records come from different sources
 - We can use this to verify the records!...
 - But they likely won't be exactly the same
- Why are the records different?
 - Time lags
 - We receive cash and checks first
 - These may still be in transit to the bank
 - Banks receive electronic checks first
 - Banks know about fees and interest first
- Time lags are shorter these days with internet banking

Reconciliation process

Journal entries to record

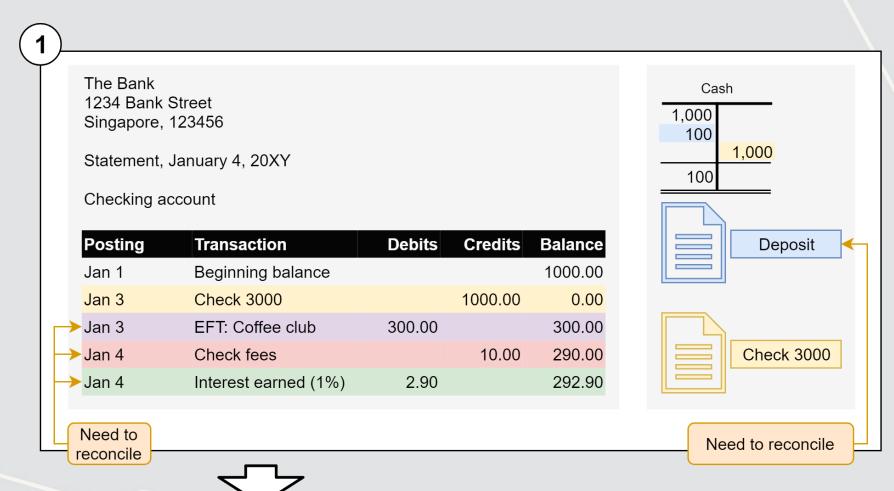

Cash up: DR cash, CR...

- Dividends received:
 - Dividend revenue
- EFT from customer:
 - A/R
- Interest from bank:
 - Interest revenue
- Prepayment:
 - Unearned revenue

Cash down: CR cash, DR...

- Charges from the bank: -Bank service charges
 - This is an expense account
- Check failed (NSF):
 - Receivable the check was for (A/R)
- Charged expenses:
 - The expense

Reconciliation example

2					
2	Company name Bank Reconciliation January 04, 20XY				
Bank balance	292.90	Book balance	100.00		
Add:		Add:			
Deposits in transit	100.00	Collections (EFT)	300.00		
Subtotal:	392.90	Interest revenue	2.90		
Subtract:		Subtotal:	402.90		
		Subtract:			
Reconciled bank	392.90	Check fee	10.00		
balance	<u> </u>	Reconciled book balance	392.90		
	Recon	ciles!			

2						
Date	Account	DR	CR			
20XY.01.04	Cash	300.00				
	Unearned revenue		300.00			
Prepayment of purchase by Coffee club						
20XY.01.04	Cash	2.90				
	Interest revenue		2.90			
Interest on bar	Interest on bank account, January 4th bank statement					
20XY.01.04	7.01.04 Bank service charges 10.00					
	Cash					
Check fees, January 4th bank statement						

Practice bank reconciliation

- 1. Get the in class activity spreadsheet
 - Session_4_Activity_Cash.xlsx
- 2. Do the bank reconciliation
 - 1. Figure out what needs to be reconciled from bank and book
 - 2. Record these in the reconciliation tab
 - 3. Make sure cash reconciles (it will in this case)
 - 4. Record the needed journal entries (3)

A/R tracking

Why have uncollectible accounts?

Case: Hanjin shipping

Read: rmc.link/101class4

CHANJIN SHIPPING Beyond the Ocean

Accounting for unexpected events

- Companies can go bankrupt, forget to pay, or breach contracts
- Two approaches:

Allowance method

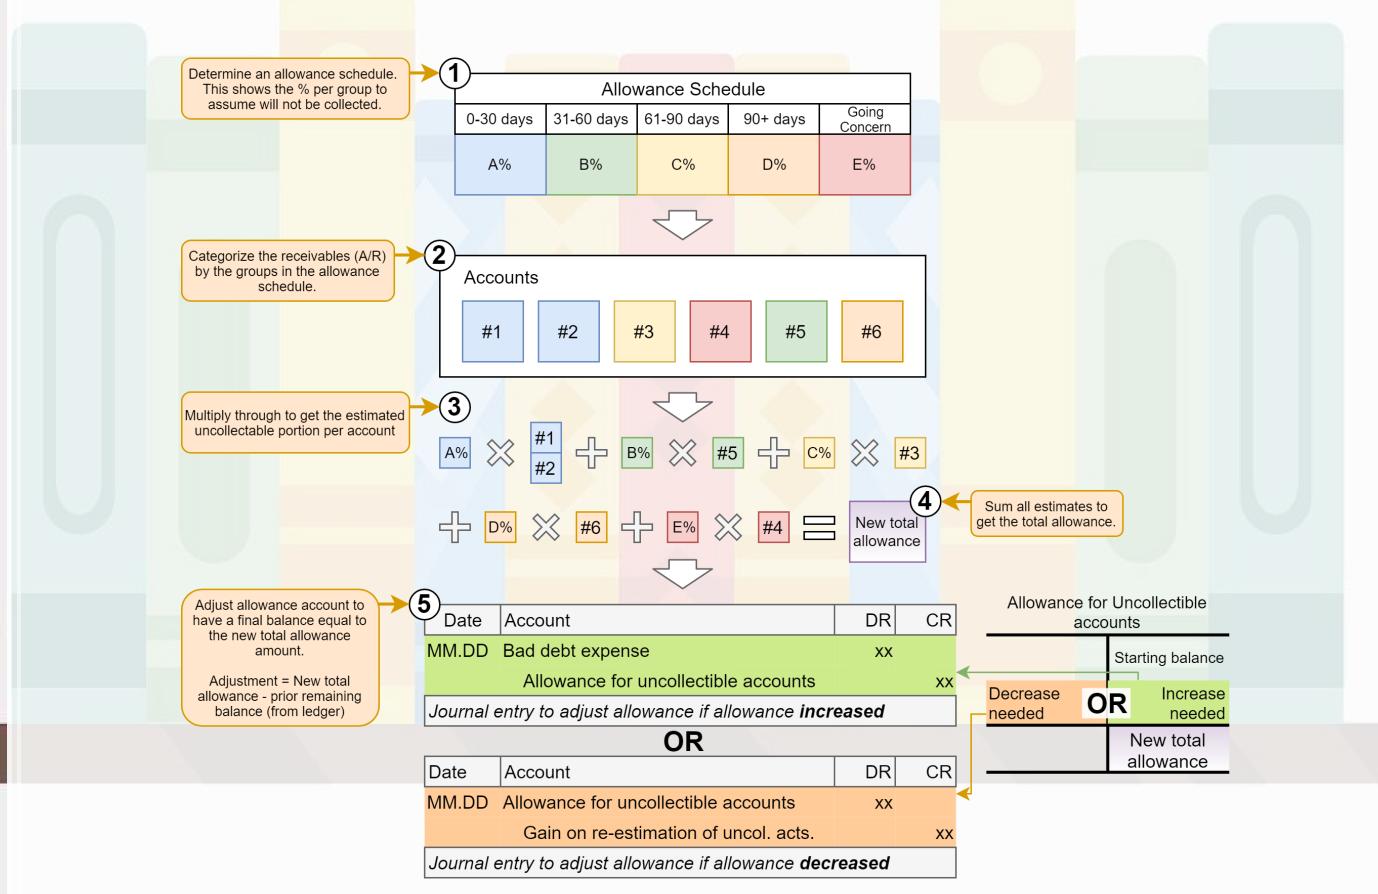

- Estimate decrease in asset values beforehand
- Allowance for uncollectible accounts
 - Contra asset
- Bad debt expense

Direct write-off method

- Write-off when the loss is guaranteed
- Violates the matching principal

We will use the allowance method (as does IFRS)

A/R allowance process

A/R allowances example

 Suppose we have the following allowance schedule and accounts receivables outstanding at year end

Allowance Schedule					
Days	Days 0-30 days 31-60 days 61-90 days 90+ days				
Percent Uncollectible	2%	10%	30%	100%	

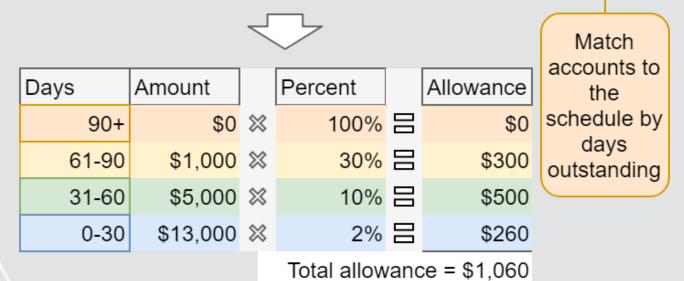

Accounts receivable					
Customer	Amount	Days outstanding	Notes		
PGUS, Inc.	\$1,000	73	Probably going under soon		
Slow, Pte. Ltd.	\$5,000	45			
GC Corp	\$2,000	29	Auditor declared going concern		
Standard & Co.	\$9,000	10			
Good Co.	\$2,000	2			

• What should our allowance be?

A/R allowances example

Allowance Schedule						
Days	Days 0-30 days 31-60 days 61-90 days 90+ days					
Percent Uncollectible	1 70/2	10%	30%	100%		

	Accounts receivable					
Customer	Amount	Days outstanding	Notes			
PGUS, Inc.	\$1,000	73	Probably going under soon			
Slow, Pte. Ltd.	\$5,000	45				
GC Corp	\$2,000	29	Auditor declared going concern			
Standard & Co.	\$9,000	10				
Good Co.	\$2,000	2	←			

This is the new allowance amount

A/R allowances example: Going concern

- What about GC Corp?
 - The auditor issued a going concern opinion
 - High chance of bankruptcy
 - Let's update the allowance schedule for that:

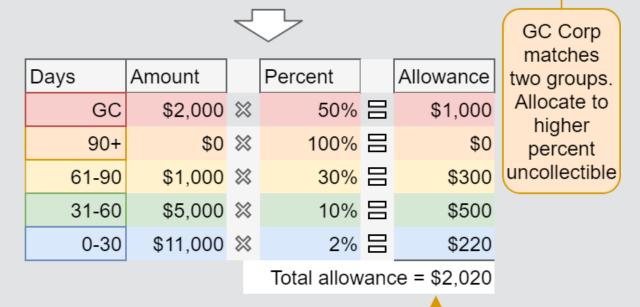

Allowance Schedule					
Days	0 - 30 days	31-60 days	61-90 days	90+ days	GC
Percent Uncollectible	2%	10%	30%	100%	50%

Accounts receivable					
Customer	Amount	Days outstanding	Notes		
PGUS, Inc.	\$1,000	73	Probably going under soon		
Slow, Pte. Ltd.	\$5,000	45			
GC Corp	\$2,000	29	Auditor declared going concern		
Standard & Co.	\$9,000	10			
Good Co.	\$2,000	2			

A/R allowances example: Going concern

Allowance Schedule					
Days	0 - 30 days	31-60 days	61 - 90 days	90+ days	GC
Percent Uncollectible	2%	10%	30%	100%	50%

	Accounts receivable					
Customer	Amount	Days outstanding	Notes			
PGUS, Inc.	\$1,000	73	Probably going under soon			
Slow, Pte. Ltd.	\$5,000	45				
GC Corp	\$2,000	29	Auditor declared going concern			
Standard & Co.	\$9,000	10	<u> </u>			
Good Co.	\$2,000	2				

This is the new allowance amount

A/R allowances example: Journal entries

Example: Recording bad debt expense, no prior balance

	. , ,			
Date	Account	DR	CR	
20YY.MM.DD	Bad debt expense	2,020		
	Allowance for uncollectible accounts		2,020	
New allowance of 2,020, no prior balance.				

Allow. Uncol. Acts.				
	0			
	2,020			
	2,020			

Example: Recording bad debt expense, lower prior balance

Date	Account	DR	CR
20YY.MM.DD	Bad debt expense	1,020	
	Allowance for uncollectible accounts		1,020
New allowance of 2,020, prior balance of 1,000			

1,000 1,020 2,020

Current balance - prior balance 2,020 - 1,000 = 1,020

Example: Recording bad debt expense, higher prior balance

Date	Account	DR	CR	
20YY.MM.DD	Allowance for uncollectible accounts	980		
	Gain on re-estimation of uncol. accounts		980	
New allowance of 2,020, prior balance of 3,000				

980 3,000 2,020

Current balance - prior balance 2,020 - 3,000 = -980 Negative => DR allowance

A/R allowances example: Bankruptcy

- Bankruptcy follows the direct write-off method
 - We record it when it happens
 - Use up some of the allowance (DR), decrease our A/R (CR)
- If the firm recovers, we reverse this transaction
- Example: PGUS goes bankrupt. During bankruptcy they pay us \$300, and we expect no further payments from them.

Practice for A/R

- 1. Get the in class activity spreadsheet
 - Session_4_Activity_AR.xlsx
- 2. Complete the activity in groups of 3-4
 - 1. Use the allowance schedule to determine the amount of uncollectible A/R needed
 - 2. Use the T-account to determine the adjustment needed
 - 3. Record the adjustment in the journal

End Matter

- 1. Quiz 1
- 2. Read the pages for next week
 - Chapter 5 (Part A)
 - Chapter 6 (Inventory)
- 3. No homework
- 4. Practice on eLearn
 - Covers bank reconciliation and A/R
 - Automatic feedback provided

Quiz resources

- TA-led review session
 - Thursday, Sept 12 at 7:00pm in SOA SR 3-3
- There is a full practice Quiz 1 on eLearn
- There is a set of extra Quiz 1 practice questions on eLearn
- There is an account glossary on eLearn
 - Lists and defines every account we've seen so far
- Select textbook problems (with answers) are posted on eLearn
