

ACCT 420: Course Logistics + R Refresh

Session 1

Dr. Richard M. Crowley

About Me

Teaching

- Fifth year at SMU
 - Also teaching ACCT 101
- Before SMU: Taught at the [University of Illinois Urbana-Champaign](#) while completing my PhD

Research

- Accounting disclosure: What companies say, and why it matters
- Approach this using AI/ML techniques

Research highlights

1. An advanced model for detecting financial misreporting using the text of annual reports.
2. Multiple project on Twitter showcasing:
 1. How companies are more likely to disclose both good and bad information than what is normal or expected
 2. That CSR disclosure on Twitter is not credible
 3. That executives' disclosures are as important on Twitter as their firms' disclosures
3. Newer work on emerging technology and on COVID-19

The above all use some sort of Neural Network or text analytics approach.

About this course

What will this course cover?

Foundations

Forecasting

Binary classification

Advanced methods

1. Foundations (*today*)

- Thinking about analytics
- In class: Setting a foundation for the course
- Outside: Practice and refining skills on Datacamp
 - Pick any R course, any level, and try it out!

2. Financial forecasting

- Predict financial outcomes
- Linear models

Getting familiar with forecasting using real data and R

What will this course cover?

Foundations

Forecasting

Binary classification

Advanced methods

3. Binary classification

- Event prediction
- Shipping delays
- Bankruptcy
- Classification & detection

4. Advanced methods

- Non-numeric data (text)
- Clustering
- AI/Machine learning (ML)
 - 1 week on Ethics of AI
 - 2 weeks on current developments

Higher level financial forecasting, detection, and AI/ML

Datacamp

- Datacamp is providing *free* access to their *full* library of analytics and coding online tutorials
 - You will have free access for 6 months (Usually \$25 USD/mo)
- Online tutorials include short exercises and videos to help you learn R
- I have assigned some limited materials via a Datacamp class
 - These count towards participation
 - Check your email for your invitation, or sign up through the link on eLearn
 - Datacamp automatically records when you finish these
 - I have personally done any tutorial I assign to ensure its quality
- You are encouraged to go beyond the assigned materials – these will help you learn more about R and how to use it

Datacamp's tutorials teach R from the ground up, and are mandatory unless you can already code in R.

Textbook

- There is no required textbook
 - Datacamp is taking the place of the textbook
- If you prefer having a textbook...
 - **R for Everyone** by Jared Lander is a good one on R
- Other course materials (slides and articles) are available at:
 - eLearn
 - <https://rmc.link/acct420>
 - Contains html versions of the slides with interactive content
- Announcements will be only on eLearn

Teaching philosophy

1. Analytics is best learned by doing it
 - Less lecture, more thinking
2. Working with others greatly extends learning
 - If you are ahead:
 - The best sign that you've mastered a topic is if you can explain it to others
 - If you are lost:
 - Gives you a chance to get help the help you need

Grading

- Standard SMU grading policy
- Participation @ 10%
- Individual work @ 20%
- Group project @ 30%
- Final exam @ 40%

Participation

- Come to class
 - If you have a conflict, email me
 - Excused classes do not impact your participation grade
- Ask questions to *extend* or *clarify*
- Answer questions and explain answers
 - Give it your best shot!
- Help those in your group to understand concepts
- Present your work to the class
- Do the online exercises on Datacamp

Outside of class

- Verify your understanding of the material
- Apply to other real world data
 - Techniques and code will be useful after graduation
- Answers are expected to be your own work, unless otherwise stated
 - No sharing answers (unless otherwise stated)
- Submit on eLearn
- I will provide snippets of code to help you with trickier parts

Group project

- Data science competition format, hosted on [Kaggle](#)
 - Multiple options for the project will be available
- The project will start on session 7
- The project will finish on session 12 with group presentations

The image shows a large audience in a dark room looking towards a stage. On the stage, a large projection screen displays the Kaggle logo in a bright blue, lowercase font. The background of the screen shows a blurred view of a website or application interface with various data visualizations and text, including the words "Loft with Open Floor Plan and Kitchen" and "Los Angeles". A person is visible on the stage to the right of the screen, appearing to be presenting.

kaggle

Final exam

- Why?
 - Ex post indicator of attainment
- How?
 - 2 hours long
 - Long format: problem solving oriented
 - A small amount of MCQ focused on techniques

Expectations

In class

- Participate
 - Ask questions
 - Clarify
 - Add to the discussion
 - Answer questions
 - Work with classmates

Out of class

- Check eLearn for course announcements
- Do the assigned tutorials on Datacamp
 - This will make the course much easier!
- Do individual work on your own (unless otherwise stated)
 - Submit on eLearn
- Office hours are there to help!
 - Short questions can be emailed instead

Tech use

- Laptops and other tech are OK!
 - Use them for learning, not messaging
 - Furthermore, you will *need* a computer for this class
 - If you do not have access to one, I can provide you a laptop loan
- Examples of good tech use:
 - Taking notes
 - Viewing slides
 - Working out problems
 - Group work
- Avoid during class:
 - Messaging your friends on Telegram
 - Working on homework for the class in a few hours
 - Watching livestreams of pandas or Hearthstone

Office hours

- Prof office hours:
 - Bookable at rnc.link/4200H
 - **Short** questions can be emailed
 - I try to respond within 24 hours

About this course: Online version addendum

General Zoom etiquette

- Keep your mic muted when you are not speaking
 - 40+ mics all on at once creates a **lot** of background noise
- You are welcome to leave your video on – seeing your reactions helps me to gauge your learning of the course content
 - If you are uncomfortable doing so, please have a profile photo of yourself
 - To do this, click yourself in the participants window, click “more” or “...” and then “Edit Profile Picture”
- Feel free to use Zoom’s Built in functionality for backgrounds
 - Just be mindful that this is considered a professional environment and that the class sessions are recorded

All sessions will be recorded to provide flexibility for anyone missing class to still see the material. It also allows you to easily review the class material.

Asking questions

- If you have a question, use the *Raise Hand* function
 - Where to find it:
 - Desktop: In the *Participants* window
 - Mobile: Under *More* in the toolbar
 - When called on:
 1. Unmute yourself.
 2. Turn on your video if comfortable with it
 3. Ask your question.
 4. You are always welcome to ask follow up questions or clarifications in succession
 5. After your question is answered, **mute your mic.**

Group work on Zoom

- I will make use of the Breakout room functionality on a weekly basis
- Your group can use the “Share screen function” to emulate crowding around one laptop
- If your group is stuck or needs clarification, you can use the *Ask for help* function to get my attention
- I will drop by each group from time to time to check in and see how you are doing with the problem
- I may also ask your group to present something to the class after a breakout session is finished.

Groups will be randomized each class session to encourage you to meet each other. Once group project groups are set, breakout sessions will be with your group project group.

Lastly...

- I don't expect everything to run 100% smoothly on either side, and there will be more leniency than a normal semester to account for this
 - If you will miss a Zoom session, please let me know the reason in advance, and then work through the recording on your own
- I always provide a survey at the end of each class session that allows you to anonymously voice anything you liked or didn't like about a session. Do use this channel if you encounter any difficulties. Common agreed-upon problems will be addressed within 1-2 class sessions.
 - The survey link is on eLearn (under the session's folder) and will be on the last slide I present each week.

About you

About you

- Survey at rnc.link/aboutyou
- Results are anonymous
- We will go over the survey next week at the start of class

Analytics

Learning objectives

- **Theory:**
 - What is analytics?
 - **Application:**
 - Who uses analytics? (and why?)
 - **Methodology:**
 - Review of R
- *Almost every class will touch on each of these three aspects

What is analytics?

What is analytics?

Oxford: The systematic computational analysis of data or statistics

Webster: The method of logical analysis

Gartner: catch-all term for a variety of different business intelligence [...] and application-related initiatives

What is analytics?

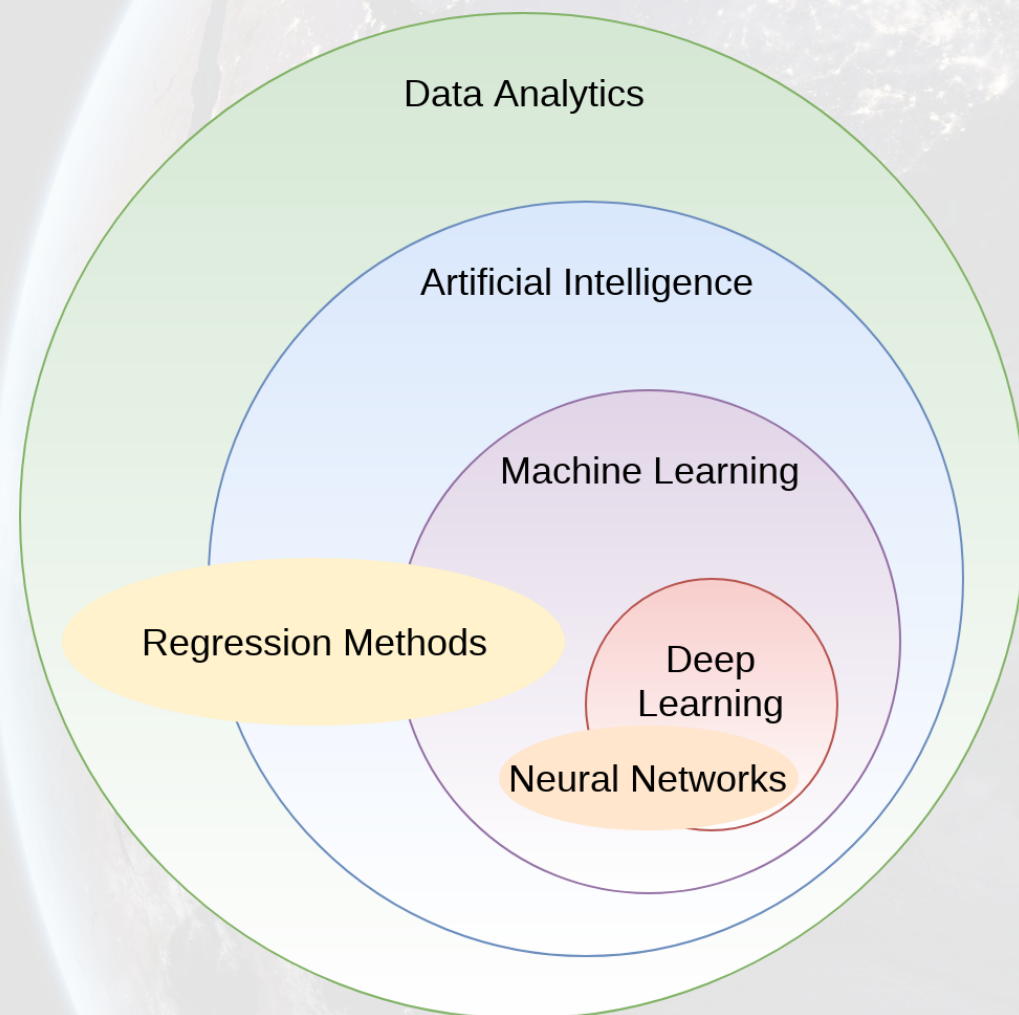

Simply put: Answering questions using data

- Additional layers we can add to the definition:
 - Answering questions using *a lot of* data
 - Answering questions using data *and statistics*
 - Answering questions using data *and computers*

Made using [ngramr](#)

Analytics vs AI/machine learning

- In class reading:
 - [AI Will Enhance Us, Not Replace Us](#)
 - By DataRobot's Senior Director of Product Marketing
 - Short link:
rmc.link/420class1

How will Analytics/AI/ML change society and the accounting profession?

What are forecasting analytics?

- Forecasting is about making an educated guess of events to come in the future
 - Who will win the next soccer game?
 - What stock will have the best (risk-adjusted) performance?
 - What will Singtel's earnings be next quarter?
- Leverage *past* information
 - Implicitly assumes that the past and the future predictably related

Past and future examples

- Past company earnings predicts future company earnings
 - Some earnings are stable over time (Ohlsson model)
 - Correlation: 0.7400142

Past and future examples

- Job reports predicts GDP growth in Singapore
 - Economic relationship
 - More unemployment in a year is related to lower GDP growth
 - Correlation of -0.1047259

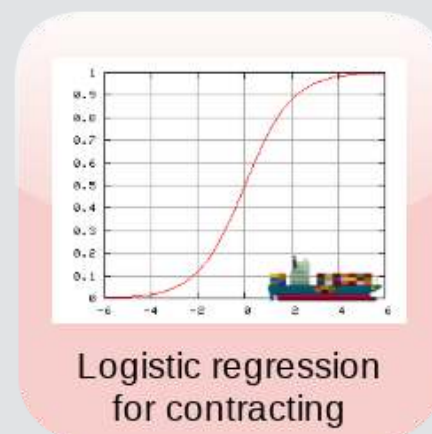

Past and future examples

- Ice cream revenue predicts pool drownings in the US
 - ???
 - Correlation is... only 0.0502886
- What about units sold?
 - Correlation is negative!!!
 - -0.720783
- What about price?
 - Correlation is 0.7872958

This is where the “educated” comes in

Forecasting analytics in this class

- Revenue/sales
- Shipping delays
- Bankruptcy
- Machine learning applications

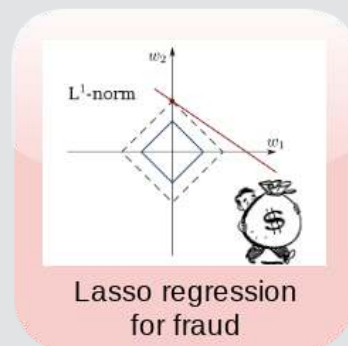

What are forensic analytics?

- Forensic analytics focus on *detection*
 - Detecting crime such as bribery
 - Detecting fraud within companies
 - Looking at a lot of dog pictures to identify features unique to each breed

Forensic analytics in this class

- Fraud detection
- Working with textual data
- Detecting changes
- Machine learning applications

Forecasting vs forensic analytics

- Forecasting analytics requires a time dimension
 - Predicting *future* events
- Forensic analytics is about understanding or detecting something
 - Doesn't need a time dimension, but it can help

These are not mutually exclusive. Forensic analytics can be used for forecasting!

Who uses analytics?

In general

- Governments
 - AI.Singapore
 - Big data office
 - “Smart” initiatives
- Academics
- Individuals!

- Companies
 - Finance
 - Manufacturing
 - Transportation
 - Computing
 - ...

53% of companies were using big data in a [2017 survey!](#)

What do companies use analytics for?

- Customer service
 - Royal Bank of Scotland
 - Understanding customer complaints
- Improving products
 - Siemens' Internet of Trains
 - Improving train reliability
- Their business
 - \$18.3B USD market in 2017
 - Just a small portion of overall IT spending (\$3.7T USD)

SIEMENS

Gartner®

What do governments use analytics for?

- Govtech
- Open data
 - Data.gov.sg
 - City of New York
- AI Singapore
 - Talent matching
 - 100 Experiments
 - AI in health Grand Challenge
 - AI research funding

What do academics use analytics for?

- Tweeting frequency by S&P 1500 companies ([paper](#))
- Aggregates every tweet from 2012 to 2016
- Shows frequency in 5 minute chunks
 - Note the spikes every hour!
- The white part is the time the NYSE is open

What do academics use analytics for?

- Annual report content that predicts fraud ([paper](#))
- For instance, discussing income is useful
 - first row is decreases, second is increases
 - But if it's good or bad depends on the year
 - For instance, in 1999 it is a red flag
 - And one that Enron is flagged for

What do individuals use analytics for?

- Consulting
 - [Radim Řehůřek](#): Maintainer of `gensim`, freelance consultant
- Investing
 - [Quantnet discussions](#)
- Health
 - Smart watches and other wearables

Why should you learn analytics?

- Important skill for understanding the world
 - **Good timing to learn it, too!**
- Gives you an edge over many others
 - Particularly useful for your career
- Jobs for “Management analysts” are expected to expand by 14% from 2016 to 2026
 - Accountants and auditors: 10%
 - Financial analysts: 11%
 - Average industry: 7%
 - All figures from US Bureau of Labor Statistics

Review of R

What is R?

- R is a “statistical programming language”
 - Focused on data handling, calculation, data analysis, and visualization
- We will use R for all work in this course

Why do we need R?

- Analytics deals with more data than we can process by hand
 - We need to ask a computer to do the work!
- R is one of the de facto standards for analytics work
 - Third most popular language for data analytics and machine learning ([source](#))
 - Fastest growing of all mainstream languages
 - Free and open source, so you can use it anywhere
 - It can do most any analytics
 - Not a general programming language

Programming in R provides a way of talking with the computer to make it do what you want it to do

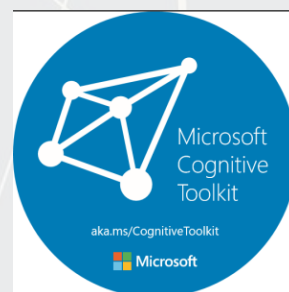

Alternatives to R

- Extremely popular
- Free and open source
- Very strong AI/ML support

- Fast and free
- Mathematics oriented
- Still young though

- Fast and free
- Focused on scalability, basis of Apache Spark

Setup for R

Setup

- For this class, I will assume you are using RStudio with the default R installation
 - [RStudio downloads](#)
 - [R for Windows](#)
 - [R for \(Max\) OS X](#) (Download R-3.6.1.pkg)
 - [R for Linux](#)
- For the most part, everything will work the same across all computer types
- Everything in these slides was tested on R 4.0.2 on Windows and Linux

How to use R Studio

1. R markdown file

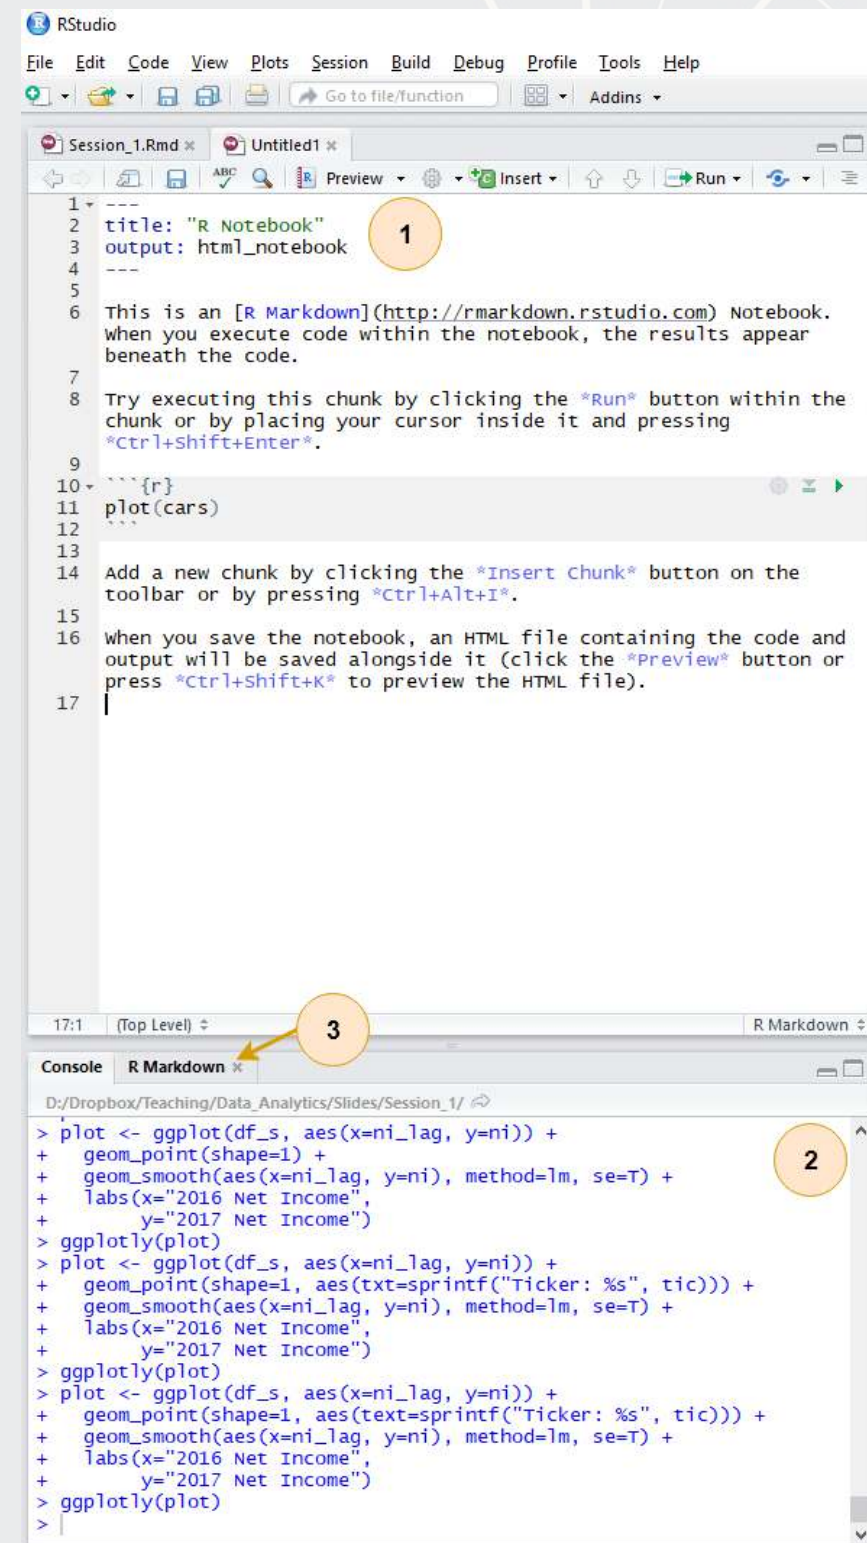

- You can write out reports with embedded analytics

2. Console

- Useful for testing code and exploring your data
- Enter your code one line at a time

3. R Markdown console

- Shows if there are any errors when preparing your report

How to use R Studio

4. Environment

- Shows all the values you have stored

5. Help

- Can search documentation for instructions on how to use a function

6. Viewer

- Shows any output you have at the moment.

7. Files

- Shows files on your computer

Basic R commands

Arithmetic

- Anything in boxes like those on the right in my slides are R code
- The slides themselves are made in R, so you could copy and paste any code in the slides right into R to use it yourself
- Grey boxes: Code
 - Lines starting with # are comments
 - They only explain what the code does
- Blue boxes: Output

```
# Addition uses '+'  
1 + 1
```

```
## [1] 2
```

```
# Subtraction uses '-'  
2 - 1
```

```
## [1] 1
```

```
# Multiplication uses '*'  
3 * 3
```

```
## [1] 9
```

```
# Division uses '/'  
4 / 2
```

```
## [1] 2
```

Arithmetic

- Exponentiation
 - Write x^y as $x \wedge y$
- Modulus
 - The remainder after division
 - Ex.: $46 \bmod 6 = 4$
 1. $6 \times 7 = 42$
 2. $46 - 42 = 4$
 3. $4 < 6$, so 4 is the remainder
- Integer division (not used often)
 - Like division, but it drops any decimal

```
# Exponentiation uses '^'  
5 ^ 5
```

```
## [1] 3125
```

```
# Modulus (aka the remainder) uses '%'  
46 %% 6
```

```
## [1] 4
```

```
# Integer division uses '%/%'  
46 %/% 6
```

```
## [1] 7
```

Variable assignment

- Variable assignment lets you give something a name
 - This lets you easily reuse it
- In R, we can name almost anything that we create
 - Values
 - Data
 - Functions
 - etc...
- We will name things using the `<-` command

```
# Store 2 in 'x'  
x <- 2  
  
# Check the value of x  
x
```

```
## [1] 2
```

```
# Store arithmetic in y  
y <- x * 2  
  
# Check the value of y  
y
```

```
## [1] 4
```

Variable assignment

- Note that values are calculated at the time of assignment
- We previously set
 $y \leftarrow 2 * x$
- If we change the values of x and y remain unchanged!

```
# Previous value of x and y  
paste(x, y)
```

```
## [1] "2 4"
```

```
# Change x, then recheck the value  
# of x and y  
x <- 200  
paste(x, y)
```

```
## [1] "200 4"
```

Application: Singtel's earnings growth

Set a variable `growth` to the amount of Singtel's earnings growth percent in 2018

```
# Data from Singtel's earnings reports, in Millions of SGD
singtel_2017 <- 3831.0
singtel_2018 <- 5430.3

# Compute growth
growth <- singtel_2018 / singtel_2017 - 1

# Check the value of growth
growth
```

```
## [1] 0.4174628
```

Recap

- So far, we are using R as a glorified calculator
- The key to using R is that we can scale this up with little effort
 - Calculating *every* public companies' earnings growth isn't much harder than calculating Singtel's!

Scaling this up will give use a lot more value

- How to scale up:
 1. Use data structures to hold collections of data
 - Could calculate growth for **all** companies instead of just Singtel, using the same basic structure
 2. Leverage **functions** to automate more complex operations
 - There are many functions built in, and **many** more freely available

Data structures

Data types

- Numeric: Any number
 - Positive or negative
 - With or without decimals
- Boolean: TRUE or FALSE
 - Capitalization matters!
 - Shorthand is T and F
- Character: “text in quotes”
 - More difficult to work with
 - You can use either single or double quotes
- Factor: Converts text into numeric data
 - Categorical data

```
company_name <- "Google" # character
company_name
```

```
## [1] "Google"
```

```
company_name <- 'Google' # character
company_name
```

```
## [1] "Google"
```

```
tech_firm <- TRUE # boolean
tech_firm
```

```
## [1] TRUE
```

```
earnings <- 12662 # numeric, $M USD
earnings
```

```
## [1] 12662
```

Scaling up...

- We already have some data entered, but it's only a small amount
- We can scale this up using ...
 - Vectors using `c()` – holds only 1 type
 - Matrices using `matrix()`! – holds only 1 type
 - Lists using `list()`! – holds anything (including other structures)
 - Data frames using `data.frame()`! – holds different types by column

Vectors: What are they?

- Remember back to linear algebra...

Examples:

$$\begin{pmatrix} 1 \\ 2 \\ 3 \\ 4 \end{pmatrix} \quad \text{or} \quad (1 \ 2 \ 3 \ 4)$$

A row (or column) of data

Vector example: Profit margin for tech firms

```
# Calculating profit margin for all public US tech firms
# 715 tech firms in Compustat with >1M sales in 2017

# Data:
#   earnings_2017: vector of earnings, $M USD
#   revenue_2017: vector of revenue, $M USD
#   names_2017: a vector of tickers (strings)

# Naming the vectors
names(earnings_2017) <- names_2017
names(revenue_2017) <- names_2017

earnings_2017[1:6]
```

```
##           AVX CORP           BK TECHNOLOGIES  ADVANCED MICRO DEVICES
##           4.910                -3.626                43.000
##   ASM INTERNATIONAL NV  SKYWORKS SOLUTIONS INC           ANALOG DEVICES
##           543.878                1010.200                727.259
```

```
revenue_2017[1:6]
```

```
##           AVX CORP           BK TECHNOLOGIES  ADVANCED MICRO DEVICES
##           1562.474                39.395                5329.000
##   ASM INTERNATIONAL NV  SKYWORKS SOLUTIONS INC           ANALOG DEVICES
##           886.503                3651.400                5107.503
```

Vector example: Profit margin for tech firms

```
# Summarizing vectors  
summary(earnings_2017)
```

```
##      Min. 1st Qu.  Median    Mean 3rd Qu.    Max.  
## -4307.49 -15.98   1.84   296.84  91.36 48351.00
```

```
summary(revenue_2017)
```

```
##      Min. 1st Qu.  Median    Mean 3rd Qu.    Max.  
##      1.06  102.62  397.57 3023.78 1531.59 229234.00
```

```
# Calculating profit margin  
margin <- earnings_2017 / revenue_2017  
summary(margin)
```

```
##      Min. 1st Qu.  Median    Mean 3rd Qu.    Max.  
## -13.97960 -0.10253  0.01353 -0.10967  0.09295  1.02655
```

```
# Worst, midpoint, and best profit margin firms in 2017. Our names carried over :)  
margin[order(margin)][c(1, length(margin) / 2, length(margin))]
```

```
## HELIOS AND MATHESON ANALYTIC          NLIGHT INC  
##                -13.97960161          0.01325588  
##                CCUR HOLDINGS INC  
##                1.02654899
```

Matrices: What are they?

- Remember back to linear algebra...

Example:

$$\begin{pmatrix} 1 & 2 & 3 & 4 \\ 5 & 6 & 7 & 8 \\ 9 & 10 & 11 & 12 \end{pmatrix}$$

A rows *and* columns of data

Selecting from matrices

- Select using 2 indexes instead of 1:
 - `matrix_name[rows, columns]`
 - To select all rows or columns, leave that index blanks

```
columns <- c("Google", "Microsoft",
             "Goldman")
rows <- c("Earnings", "Revenue")

firm_data <- matrix(data=
  c(12662, 21204, 4286, 110855,
    89950, 42254), nrow=2)
# Equivalent:
# matrix(data=c(12662, 21204, 4286,
# 110855, 89950, 42254), ncol=3)

# Apply names
rownames(firm_data) <- rows
colnames(firm_data) <- columns

# Print the matrix
firm_data
```

```
##           Google Microsoft Goldman
## Earnings  12662      4286  89950
## Revenue  21204  110855  42254
```

```
firm_data[2, 3]
```

```
## [1] 42254
```

```
firm_data[, c("Google", "Microsoft")]
```

```
##           Google Microsoft
## Earnings  12662      4286
## Revenue  21204  110855
```

```
firm_data[1,]
```

```
##           Google Microsoft Goldman
##           12662      4286  89950
```

```
firm_data["Revenue", "Goldman"]
```

```
## [1] 42254
```

Combining matrices

- Matrices are combined top to bottom as rows with `rbind()`
- Matrices are combined side-by-side as columns with `cbind()`

```
# Preloaded: industry codes as indcode (vector)  
# - GICS codes: 40=Financials, 45=Information Technology  
# - See: https://en.wikipedia.org/wiki/Global_Industry_Classification_Standard  
# Preloaded: JPMorgan data as jpdata (vector)  
  
mat <- rbind(firm_data, indcode) # Add a row  
rownames(mat)[3] <- "Industry" # Name the new row  
mat
```

```
##           Google  Microsoft  Goldman  
## Earnings  12662      4286     89950  
## Revenue   21204     110855    42254  
## Industry    45         45       40
```

```
mat <- cbind(firm_data, jpdata) # Add a column  
colnames(mat)[4] <- "JPMorgan" # Name the new column  
mat
```

```
##           Google  Microsoft  Goldman  JPMorgan  
## Earnings  12662      4286     89950    17370  
## Revenue   21204     110855    42254    115475
```

Lists: What are they?

- Like vectors, but with mixed types
- Generally not something we will create
- Often returned by analysis functions in R
 - Such as the linear models we will look at next week

```
# Ignore this code for now...
model <- summary(lm(earnings ~ revenue, data=tech_df))
#Note that this function is hiding something...
model
```

```
##
## Call:
## lm(formula = earnings ~ revenue, data = tech_df)
##
## Residuals:
##      Min       1Q   Median       3Q      Max
## -16045.0    20.0    141.6    177.1   12104.6
##
## Coefficients:
##              Estimate Std. Error t value Pr(>|t|)
## (Intercept) -1.837e+02  4.491e+01  -4.091 4.79e-05 ***
## revenue      1.589e-01  3.564e-03  44.585 < 2e-16 ***
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
##
## Residual standard error: 1166 on 713 degrees of freedom
## Multiple R-squared:  0.736, Adjusted R-squared:  0.7356
## F-statistic: 1988 on 1 and 713 DF, p-value: < 2.2e-16
```

Looking into lists

- Lists generally use double square brackets, `[[index]]`
 - Used for pulling individual elements out of a list
- `[[c()]]` will drill through lists, as opposed to pulling multiple values
- Single square brackets pull out elements as is
- Double square brackets extract just the element
- For 1 level, we can also use `$`

```
model["r.squared"]
```

```
## $r.squared  
## [1] 0.7360059
```

```
model[["r.squared"]]
```

```
## [1] 0.7360059
```

```
model$r.squared
```

```
## [1] 0.7360059
```

```
earnings <- c(12662, 21204, 4286)  
company <- c("Google", "Microsoft", "  
names(earnings) <- company  
earnings["Google"]
```

```
## Google  
## 12662
```

```
earnings[["Google"]]
```

```
## [1] 12662
```

```
#Can't use $ with vectors
```

Structure of a list

- `str()` will tell us what's in this list

```
str(model)
```

```
## List of 11
## $ call      : language lm(formula = earnings ~ revenue, data = tech_df)
## $ terms     :Classes 'terms', 'formula' language earnings ~ revenue
## ..- attr(*, "variables")= language list(earnings, revenue)
## ..- attr(*, "factors")= int [1:2, 1] 0 1
## ..- attr(*, "dimnames")=List of 2
## ..$ : chr [1:2] "earnings" "revenue"
## ..$ : chr "revenue"
## ..- attr(*, "term.labels")= chr "revenue"
## ..- attr(*, "order")= int 1
## ..- attr(*, "intercept")= int 1
## ..- attr(*, "response")= int 1
## ..- attr(*, ".Environment")=<environment: R_GlobalEnv>
## ..- attr(*, "predvars")= language list(earnings, revenue)
## ..- attr(*, "dataClasses")= Named chr [1:2] "numeric" "numeric"
## ..- attr(*, "names")= chr [1:2] "earnings" "revenue"
## $ residuals  : Named num [1:715] -59.7 173.8 -620.2 586.7 613.6 ...
## ..- attr(*, "names")= chr [1:715] "1" "2" "3" "4" ...
## $ coefficients : num [1:2, 1:4] -1.84e+02 1.59e-01 4.49e+01 3.56e-03 -4.09 ...
## ..- attr(*, "dimnames")=List of 2
## ..$ : chr [1:2] "(Intercept)" "revenue"
```

What are data frames?

- Data frames are like a hybrid between lists and matrices

Like a matrix:

- 2 dimensional like matrices
- Can access data with `[]`
- All elements in a column must be the same data type

Like a list:

- Can have different data types for different columns
- Can access data with `$`

Columns \approx variables, e.g., earnings

Rows \approx observations, e.g., Google in 2017

Dealing with data frames

There are three schools of thought on this

1. Use *Base R* functions (i.e., what's built in)
 - Tends to be tedious
2. Use *tidy* methods (from `tidyverse`)
 - Almost always cleaner and more readable
 - Sometimes faster, sometimes slower
 - This creates a structure called a `tibble`
3. Use *data.table* (from `data.table`)
 - Very structured syntax, but difficult to read
 - Almost always fastest – use when speed is needed
 - This creates a structure called a `data.table`

Cast either to a `data.frame` using `as.data.frame()`

Data in Base R

Note: Base R methods are explained in the [R Supplement](#)

```
library(tidyverse) # Imports most tidy packages
# Base R data import -- stringsAsFactors is important here
df <- read.csv("../Data/Session_1-2.csv", stringsAsFactors=FALSE)
df <- subset(df, fyear == 2017 & !is.na(revt) & !is.na(ni) &
             revt > 1 & gsector == 45)
df$margin = df$ni / df$revt
summary(df)
```

```
##      gvkey      datadate      fyear      indfmt
## Min.   : 1072   Min.   :20170630   Min.   :2017   Length:715
## 1st Qu.: 20231 1st Qu.:20171231 1st Qu.:2017   Class :character
## Median : 33232 Median :20171231 Median :2017   Mode  :character
## Mean   : 79699 Mean   :20172029 Mean   :2017
## 3rd Qu.:148393 3rd Qu.:20171231 3rd Qu.:2017
## Max.   :315629 Max.   :20180430 Max.   :2017
##
##      consol      popsrc      datafmt      tic
## Length:715     Length:715     Length:715     Length:715
## Class :character Class :character Class :character Class :character
## Mode  :character Mode  :character Mode  :character Mode  :character
##
##
##
##      conm      curcd      ni      revt
## Length:715     Length:715     Min.   : -4307.49 Min.   : 1.06
```

Data the tidy way

```
# Tidy import
df <- read_csv("../Data/Session_1-2.csv") %>%
  filter(fyear == 2017,      # fiscal year
         !is.na(revt),      # revenue not missing
         !is.na(ni),        # net income not missing
         revt > 1,          # at least 1M USD in revenue
         gsector == 45) %>% # tech firm
  mutate(margin = ni/revt)  # profit margin
summary(df)
```

```
##      gvkey          datadate          fyear          indfmt
## Length:715      Min.      :20170630      Min.      :2017      Length:715

##                Max.  :      48351.00      Max.  :      229234.00
```

Other important tidy methods

- Sorting: use `arrange()`
- Grouping for calculations:
 - Group using `group_by()`
 - Ungroup using `ungroup()` once you are done
- Keep only a subset of variables using `select()`
- We'll see many more along the way!

A note on syntax: Piping

Pipe notation is never necessary and not built in to R

- Piping comes from `magrittr`
 - The `%>%` pipe is loaded with `tidyverse`
- Pipe notation is done using `%>%`
 - `Left %>% Right (arg2, ...)` is the same as `Right (Left, arg2, ...)`

Piping can drastically improve code readability

- `magrittr` has other interesting pipes, such as `%<>%`
 - `Left %<>% Right (arg2, ...)` is the same as `Left <- Right (Left, arg2, ...)`

Tidy example without piping

Note how unreadable this gets (but output is the same)

```
df <- mutate(  
  filter(  
    read_csv("../Data/Session_1-2.csv"),  
    fyear == 2017,      # fiscal year  
    !is.na(revt),      # revenue not missing  
    !is.na(ni),        # net income not missing  
    revt > 1,          # at least 1M USD in revenue  
    gsector == 45),    # tech firm  
  margin = ni/revt)    # profit margin
```

```
##      gvkey          datadate          fyear          indfmt  
## Length:715      Min.      :20170630      Min.      :2017      Length:715  
## Class :character 1st Qu.:20171231      1st Qu.:2017      Class :character  
## Mode  :character Median :20171231      Median :2017      Mode  :character  
##              Mean   :20172029      Mean   :2017  
##              3rd Qu.:20171231      3rd Qu.:2017  
##              Max.   :20180430      Max.   :2017  
##      consol          popsrc          datafmt          tic  
## Length:715      Length:715      Length:715      Length:715  
## Class :character Class :character Class :character Class :character  
## Mode  :character Mode  :character Mode  :character Mode  :character  
##  
##  
##      conm          curcd          ni          revt
```

Practice: Data types and structures

- This practice is to make sure you understand data types
- Do exercises 1 through 3 on today's R practice file:
 - [R Practice](#)
 - Short link: rnc.link/420r1

Useful functions

Reference

Many useful functions are highlighted in the [R Supplement](#)

1. Installing and loading packages

```
# Install the tidyverse package from inside R
```

```
install.packages("tidyverse")
```

```
# Load the package
```

```
library(tidyverse)
```

2. Help functions

```
# To see a help page for a function (such as data.frame()) run either of:
```

```
help(data.frame)
```

```
?data.frame
```

```
# To see the arguments a function takes, run:
```

```
args(data.frame)
```

```
## function (... , row.names = NULL, check.rows = FALSE, check.names = TRUE,  
##       fix.empty.names = TRUE, stringsAsFactors = default.stringsAsFactors())  
## NULL
```

Making your own functions!

- Use the `function()` function!
 - `my_func <- function(arguments) {code}`

Simple function: Add 2 to a number

```
add_two <- function(n) {  
  n + 2  
}
```

```
add_two(500)
```

```
## [1] 502
```

Slightly more complex function example

```
mult_together <- function(n1, n2=0, square=FALSE) {  
  if (!square) {  
    n1 * n2  
  } else {  
    n1 * n1  
  }  
}
```

```
mult_together(5, 6)
```

```
## [1] 30
```

```
mult_together(5, 6, square=TRUE)
```

```
## [1] 25
```

```
mult_together(5, square=TRUE)
```

```
## [1] 25
```

Example: Currency conversion function

```
FXRate <- function(from="USD", to="SGD", dt=Sys.Date()) {  
  options("getSymbols.warning4.0"=FALSE)  
  require(quantmod)  
  data <- getSymbols(paste0(from, "/", to), from=dt-3, to=dt, src="oanda", auto.as  
  return(data[[1]])  
}  
date()
```

```
## [1] "Mon Aug 17 01:14:41 2020"
```

```
FXRate(from="USD", to="SGD") # Today's SGD to USD rate
```

```
## [1] 1.371802
```

```
FXRate(from="SGD", to="CNY") # Today's SGD to CNY rate
```

```
## [1] 5.065638
```

```
FXRate(from="USD", to="SGD", dt=Sys.Date()-90) # Last quarter's SGD to USD rate
```

```
## [1] 1.42746
```

Practice: Functions

- This practice is to make sure you understand functions and their construction
- Do exercises 4 and 5 on today's R practice file:
 - [R Practice](#)
 - Shortlink: rmc.link/420r1

Wrap up

- For next week:
 - Take a look at Datacamp!
 - Be sure to complete the assignment there
 - A complete list of assigned modules over the course is on eLearn
 - We'll start in on some light analytics next week

Packages used for these slides

- DT
- kableExtra
- knitr
- ngramr
- plotly
- quantmod
- revealjs
- RColorBrewer
- tidyverse

Custom functions

```
# Custom code to use Google Ngrams data  
library(ngramr)  
library(ggplot2)  
ngd <- c("(Analytics + analytics)", "(Machine learning + machine learning)")  
gggram(ngd, year_start=1960, geom = "area", google_theme=F, smoothing = 3) + theme(legend.position="bottom", legend.direction="horizontal")
```

Appendix: Getting data from WRDS

Data Sources

- WRDS
 - WRDS is a provider of business data for academic purposes
 - Through your class account, you can access vast amounts of data
 - We will be particularly interested in:
 - Compustat (accounting statement data since 1950)
 - CRSP (stock price data, daily since 1926)
- We will use other public data from time to time
 - Singapore's big data repository
 - US Government data
 - Other public data collected by the Prof

How to download from WRDS

1. Log in using a class account (posted on eLearn)
2. Pick the data provider that has your needed data
3. Select the data set you would like (some data sets only)
4. Apply any needed conditional restrictions (years, etc.)
 - These can help keep data sizes manageable
 - CRSP without any restrictions is >10 GB
5. Select the specific variables you would like export
6. Export as a csv file, zipped csv file (or other format)

Picture walkthrough for WRDS

Go to **WRDS** and sign in

The screenshot shows a web browser window with the URL <https://wrds-web.wharton.upenn.edu/wrds/>. The page features the Wharton University of Pennsylvania logo and the text "wrds WHARTON RESEARCH DATA SERVICES". A "DEMO" button is visible in the top right corner. The main content area is titled "Sign In" and includes a "Sign In" button (selected) and a "Register" button. Below these are input fields for "Username" and "Password", followed by a "Submit" button. There are three links: "Register for a WRDS Account", "Forgot your username/password?", and "Request Account Transfer". To the right of the sign-in form is a "Welcome to WRDS!" section with several paragraphs of text describing the platform's capabilities and data sources. At the bottom of this section is a link to "Connect with us on Facebook!".

Welcome to WRDS!

Wharton Research Data Services (WRDS) is the award-winning research platform and business intelligence tool for over 40,000+ corporate, academic, government and nonprofit clients at over 400+ institutions in 30+ countries.

WRDS provides the user with one location to access over 250 terabytes of data across multiple disciplines including Accounting, Banking, Economics, Finance, ESG, and Statistics.

Flexible data delivery options include a powerful web query method that reduces research time, the WRDS Cloud for executing research and strategy development, and the WRDS client server using PCSAS, Matlab, Python and R.

Our Analytics team, doctoral-level support and rigorous data review and validation give clients the confidence to tailor research within complex databases and create a wide range of reliable data models.

WRDS provides access to S&P Capital IQ, CRSP, NYSE, Thomson Reuters, Bureau van Dijk, Global Insight, OptionMetrics and other important business research databases.

From partnerships with data vendors, to our own tools including the WRDS SEC Analytics Suite, WRDS Quant Alpha Platform and the Wharton School's OTIS - WRDS is the global gold standard in data management and research, all backed by the credibility and leadership of the Wharton School.

For additional information, please see the [About section](#).

Legacy Compustat Tools SNL

Pick a data set, e.g. “Fundamentals Annual”

The screenshot shows a web browser window with the URL https://wrds-web.wharton.upenn.edu/wrds/query_forms/navigation.cfm?navId=83. The page header includes the Wharton University of Pennsylvania logo, the WRDS (Wharton Research Data Services) logo, and a search bar labeled "Search WRDS". Navigation links include "Get Data", "Analytics", "Classroom", "Research", and "Support". The breadcrumb trail is: Home / Get Data / Compustat - Capital IQ / Compustat Daily Updates / North America - Daily.

North America - Daily

For more about this dataset, see the [Dataset List](#), [Manuals and Overviews](#) or [FAQs](#).

Compustat North America is a database of U.S. and Canadian fundamental and market information on active and inactive publicly held companies. It provides more than 300 annual and 100 quarterly Income Statement, Balance Sheet, Statement of Cash Flows, and supplemental data items. For most companies, annual history is available back to 1950 and quarterly history back to 1962 with monthly market history back to 1962.

Compustat North America files also contain information on aggregates, industry segments, banks, market prices, dividends, and earnings.

Fundamentals Annual	Industry Specific Quarterly	Segments (Non-Historical)
Fundamentals Quarterly	Pension Annual	Segments (Non-Historical) - Customer
Index Constituents	Pension Quarterly	Simplified Financial Statement Extract
Index Fundamentals	Ratings	Supplemental Short Interest File
Index Prices	Security Daily	
Industry Specific Annual	Security Monthly	

The footer contains the Wharton University of Pennsylvania logo and several links: "About WRDS", "WRDS FAQs", "WRDS News", "3 Ways to use WRDS", "Account Types on WRDS", "Terms of Use", "Account Preferences", "Info / Support Request", "Privacy Policy", "WRDS Demo", "Conference Calendar", and "Best Paper Awards".

Currency USD CAD Output

Company Status Active Inactive Output

Selecting data fields

The screenshot shows a web browser window with the URL `https://wrds-web.wharton.upenn.edu/wrds/ds/compd/funda/index.cfm?navId=83`. The page has a top navigation bar with the following tabs: **Search All** (0/973), **Identifying Information** (0/7), **Identifying Information, cont.** (0/34), and **Company Desc** (with a right arrow). Below the navigation bar, there are two main sections:

- Selection Controls:** A "Select" section with a checked "All" checkbox, and a "Selected" section with an unchecked "Clear All" checkbox and a "(0)" count.
- Data Fields List:** A scrollable list of data fields, each with a radio button and a help icon (?). The fields are:
 - Company Name
 - Ticker Symbol
 - CUSIP
 - CIK Number
 - Stock Exchange Code
 - Fiscal Year-End
 - Foreign Incorporation Code
 - ADD1 -- Address Line 1
 - ADD2 -- Address Line 2
 - ADD3 -- Address Line 3
 - ADD4 -- Address Line 4

At the bottom of the page, there is a section titled "Conditional Statements (Optional)" with a link "How does this work?".

Select output formats

 **Wharton** wrds WHARTON RESEARCH DATA SERVICES

Your data query results will be accessible for the next 48 hours in the MyWRDS section of the website.

Notice:
Your use of WRDS and this data extract must comply with the [WRDS Terms of Use](#). There may be additional usage restrictions that are governed by your institution's licensing of specific databases. If you have any questions about data licensing and appropriate usage, please contact WRDS using the [Support form](#).

Data Request Summary

[[Cancel This Query](#)]

Your request is being processed. When finished, the output will be found at: <https://wrds-sol2.wharton.upenn.edu/output/ff9ba6b0afaa6f4b.html?>

This page will refresh every 5 seconds until the output appears.

If the output is not displayed...

- Check your web browser preferences to ensure that cached data is compared to the network **every time**.
- Contact WRDS by using the [Support form](#).

Please note that the output will remain on the system for 48 hours.

Data Request ID	ff9ba6b0afaa6f4b
Libraries/Data Sets	compd/funda /
Frequency/Date Range	ann / 01Jan2010 - 30Jun2018
Search Variable	TIC
Input Codes all item(s)	-all-
Conditional Statements	n/a
Output format/Compression	txt /
Variables Selected	CONM
Extra Variables and Parameters Selected	C INDL STD
