ACCT 101: Financial Statement Analysis

Session 11

Dr. Richard M. Crowley

Frontmatter

Final exam details

- The exam will be done electronically on eLearn. Students in Singapore will take the exam at SMU; students abroad will take the exam simultaneously.
- 8 questions that consist of problem solving, journal entries, reasoning & explanations, preparation of partial or full statements, and financial statement analysis (including ratios). PV/PVA tables will be given (for bonds).
- These are comprehensive questions that integrate several topics. The following topics will be covered:
 - Accounts receivable and bad debt
 - Bank reconciliation
 - Inventory and COGS
 - Long term assets
 - Accrual accounting: processing information & adjusting
 - Liabilities
 - Stockholders' equity
 - Statement of cash flows
 - Financial ratios
- Ratios: you must use the formulas in these lecture slides. Formulas will **not** be provided in the exam papers.
- Not covered: Par value for common shares; periodic inventory systems
- Use sample (past year) exam papers with caution. The content, coverage, and difficulty level may be different.

Final exam resources

- Practice final exams
 - These are old exams which I have made annotations to in order to keep them relevant
- Additional practices
- Additional selected book problems
- **Review session by TAs**
 - In mid-to-late November
- Office hours book online!
- eLearn practices (257 questions and counting!)
 - These can be very helpful to identify what you need to study
- All practices from quiz 1 and quiz 2

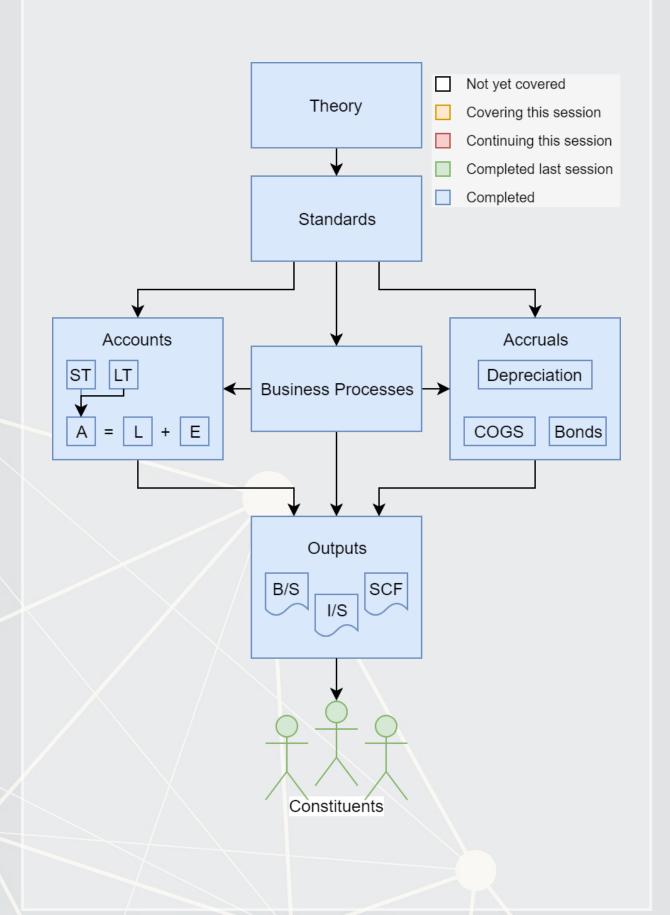

Final exam tips

- Remember that everyone is taking the same exam if you find it difficult or long, others likely think the same.
- If you are stuck on a question, skip it and come back later. It's better to solve everything that you know well and then work on those you are stuck on.
- If you are really stuck on a topic while studying for finals, drop by my office hours and we'll get it worked out.
- Course grades will be curved.

Learning objectives

- 1. Learn about financial statement analysis
- 2. Calculate and interpret financial ratios

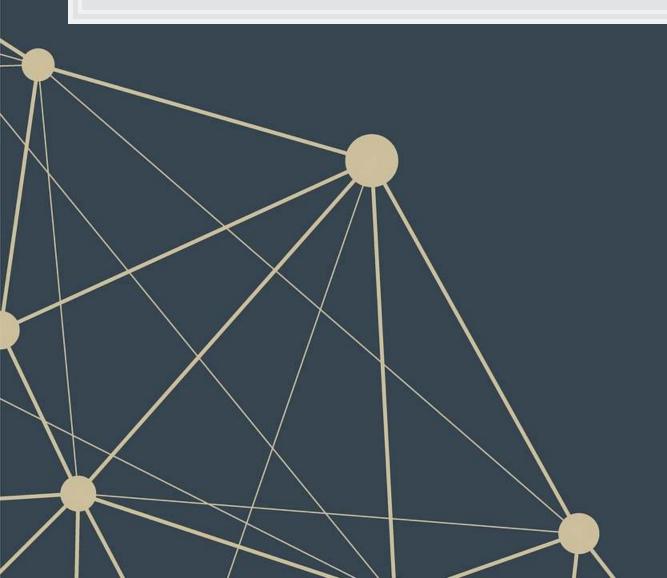

Financial statement analysis

What matters?

1. The business environment

- Economy health
- Other countries (particularly for multinational firms)
- Industry demand
- Resource scarcity or supplier concentration
- Consumer concentration

What matters?

- 2. Historical financials
 - Financial statements and notes
 - Competitors statements

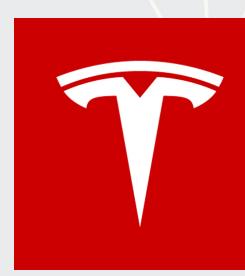

https://rmc.link/101class11-1

What matters?

3. Historical non-financials

- Governance, Risk disclosures, Audit report
- Shareholders, supplier relationships

https://rmc.link/101class11-2

https://rmc.link/101class11-3

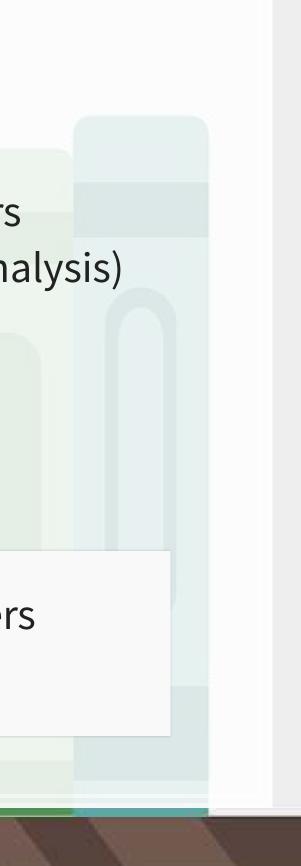

Predicting firm value

Trend analysis (a.k.a. Horizontal analysis)
 Compare dollar and percent changes across years
 Common size financial statements (a.k.a. Vertical analysis)
 Compare financials across years or firms
 A subset of ratio analysis

3. Ratio analysis

4. Analytics

Only ratio analysis is on the final – we'll cover the others briefly.

Trend analysis

What is it?

- Comparing different years or quarters of data to see the trend in measures.
- Examples:
 - Revenue grew by 3% this year
 - Net income grew by 4% this quarter
 - Quarterly revenue decreased 2% year over year

Nike Rides Out its #MeToo Moment, WSJ

That is a reflection of a strong quarter: Nike reported earnings of 68 cents a share, beating analysts' estimates by 15 cents, and *grew revenue by* 7%.

China's Tencent Invests in Video, AI and Mobile Payments, as Earnings Soar, WSJ

The plans emerged as the Shenzhen-based company said its fourth-quarter revenue grew 51% year over year to 66.4 billion yuan (\$10.2 billion), boosted by strong growth in mobile payments, digital content subscriptions and advertising on its flagship mobile social apps, WeChat and QQ.

How to do it

1. Get 2 financial statements from the same company (typically the income statement)

2. Find the percentage change from the old figures to the new figures

Microso Partial Income S In Millions o	Statement			
Year ended June 30,	2017	2016		
Revenue				
Product	51,190	61,502		17% decrease
Service	32,760	23,818		38% increase
Total revenue	89,950	85,320		5.4% increase
Total cost of revenue	34,261	32,780		4.5% increase
Gross margin	55,689	52,540		6.0% increase
Research and development	13,037	11,988		8.8% increase
Sales and marketing	15,539	14,697		5.7% increase
Net income	21,204	16,798	\Rightarrow	26% increase

Common-size financial statements

What is it?

- Standardizing figures in a financial statement by dividing by another figure.
- Allows for comparing finanical statements accross companies
- Ex.:
 - Divide an income statement by revenue
 - $\frac{Gross\ profit}{D} = Gross\ Margin$ Revenue
 - $\frac{Net \ income}{Devenue} = Profit \ Margin$ Revenue
 - Divide financial statements by total assets

Cheerios Could Get Pricier as General Mills Faces Rising Costs, WSJ

Fourteen of the last 15 packaged food makers to [report] earnings posted lower-than-expected gross margins, said J.P. Morgan analyst Ken Goldman.

Ford CEO Says Company Could Exceed 8% Margin Target, WSJ

The company is forecasting an 8% global profit margin by about 2022, a number that would put it closer to betterperforming peers, including GM. Ford's 5% operating margin last year was disappointing...

How to do it

1. Get a financial statement

2. Divide every number by the same amount (sales, total ass get the percent (of sales, of assets, etc.)

Microsoft Partial Income Statem In Millions of USD			Percent of sales	Apple Partial Income Staten In Millions of USD		
Year ended June 30,	2017			Year ended September 30,	2017	
Total revenue	89,950	\Rightarrow	100%	Total revenue	229,234	
Total cost of revenue	34,261	\Rightarrow	38.1%	Total cost of revenue	141,048	
Gross margin	55,689	\Rightarrow	61.9%	Gross margin	88,186	
Research and development	13,037	\Rightarrow	14.5%	Research and development	11,581	
Sales and marketing	20,326	\Rightarrow	22.6%	Sales and marketing	15,261	
Net income	21,204	⇒	23.6%	Net income	48,351	

We can compare accross companies or years

et	s, etc.) to	
	Percent of sales		
\rightarrow	100%		
	61.5%		
~ ~	38.5%		
	5.1% 6.7%		
\rightarrow	21.1%		
]	

Balance sheet ratios

What is ratio analysis?

Using various ratios of numbers from financial statements to better understand companies

All examples use the following data

Microsoft Partial Income Statement In millions of USD			
Year ended June 30,	2017	2016	
Revenue			
Product	51,190	61,502	
Service	32,760	23,818	
Total revenue	89,950	85,320	
Total cost of revenue (COGS)	34,261	32,780	
Gross margin	55,689	52,540	
Research and developmen	t 13,037	11,988	
Sales and marketing	15,539	14,697	
Operating income	22,326	20,182	
Interest expense	2,222	1,243	
Net income	21 204	16 709	
Net income	21,204	16,798	

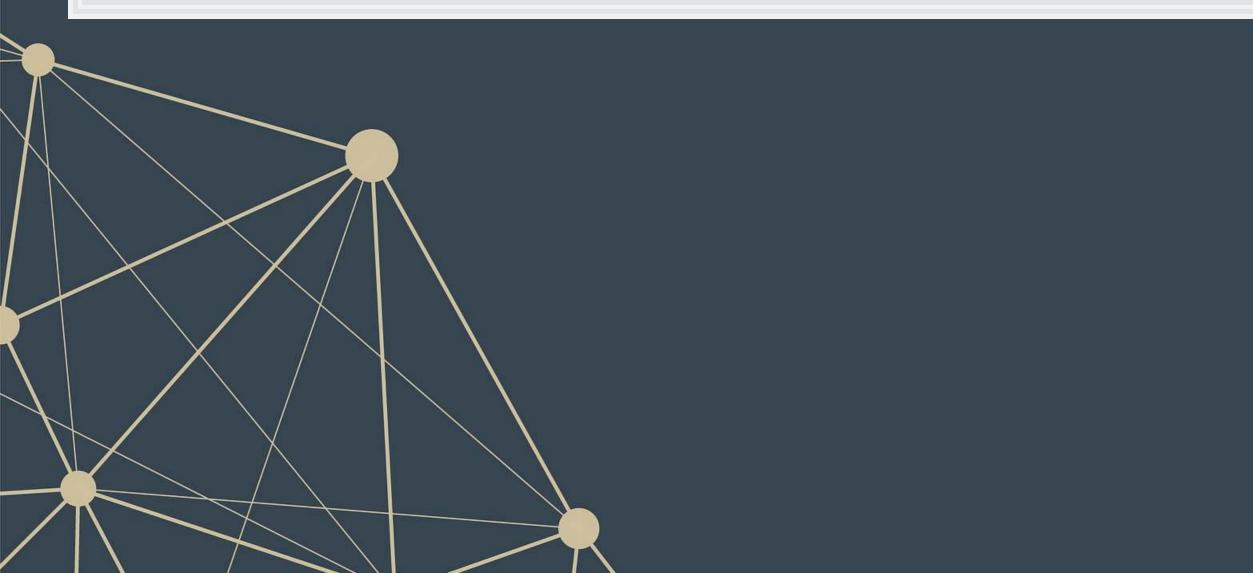

Microsoft Partial Balance Sheet In millions of USD			MSF (price in Us dividends p	
Year ended June 30,	2017	2016	June 30,	20
Current assets			Price	68
Cash	7,663	6,510	Shares	7,7

Inventory	2,181	2,251		
Total current assets	159,851	139,660		
Total assets Current liabilities	241,086	193,468		
A/P	7,390	6,898		
Total current liabilities	64,527	59,357		
Total liabilities	168,692	121,471		
Total equity	72,394	71,997		

ock Quotes shares in millions. n millions of USD)

017	2016
.93	51.17
708	7,808
040	11.329

Caveats

- 1. There are a few differences between the ratios in these slides and in the book. These differences are due to simplifications I have made – you can use these ratios on the final instead of the book's ratios without penalty.
- 2. Some ratios have many definitions. If you look online, you may find other definitions for some of these ratios. Don't use those on the final.

Inventory turnover

COGS

 $\frac{1}{2}(Inventory_T + Inventory_{T-1})$

- How many times per year a company sells its inventory on hand
- A similar measure is *Inventory resident period*
 - A.k.a. Number of days' sales in inventory
 - Calculated as $\frac{365}{Inventory\ turnover}$
 - The number of days it take to sell the company's inventory

Microsoft's 2017 inv. turnover: $\frac{34,261}{\frac{1}{2}(2,181+2,251)} = 15.46$

Microsoft's 2017 inv. period: $\frac{365}{15.46} = 23.6 \ days$

Accounts receivable turnover

Revenue $\frac{1}{2}(A/R_T + A/R_{T-1})$

- How many times per year a company collects its A/R on hand
- A similar measure is *Receivable collection period*
 - A.k.a. Number of days' sales in receivables
 - Calculated as <u>Accounts receivable turnover</u>
 - The number of days it take to collect the company's A/R

Microsoft's 2017 A/R turnover: $\frac{89,950}{\frac{1}{2}(19,792+18,277)} = 4.73$

Microsoft's 2017 A/R period: $\frac{365}{4.73} = 77.2 \ days$

Payable turnover

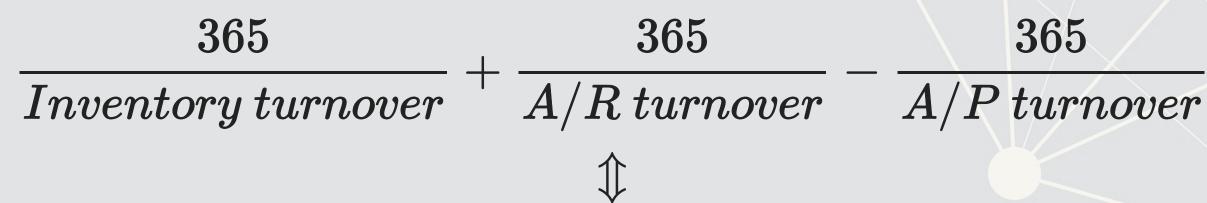

$$COGS \ {1\over 2} (A/P_T + A/P_{T-1})$$

- How many times per year a company pays its A/P it owes
- A similar measure is *Payable outstanding period*
 - Calculated as <u>365</u> *Payable turnover*
 - The number of days it take to pay the company's A/P

Microsoft's 2017 A/P turnover: $\frac{34,261}{\frac{1}{2}(7,390+6,898)} = 4.80$

Microsoft's 2017 A/P period: $\frac{365}{4.80} = 76.1 \ days$

Cash conversion cycle

Receivable collection period+Inventory resident period-Payable outstanding period

- Measures how long it takes to convert inventory to cash, less time to pay payables
 - Time from paying for inventory to getting cash on sale
- Can calculate from turnover ratios or periods

Microsoft's 2017 cash conversion cycle: $23.6 + 77.2 - 76.1 = 24.7 \ days$

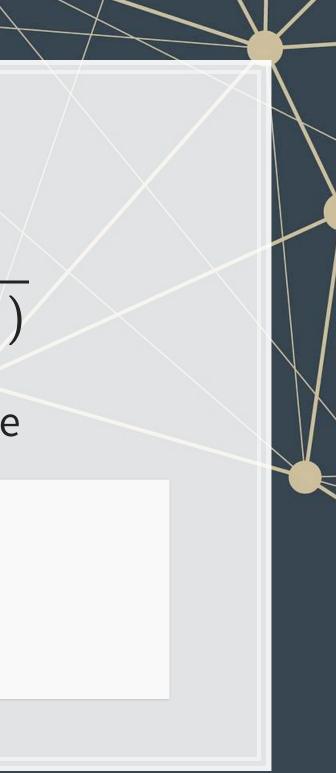

365

Asset turnover

 $ext{Asset turnover} = rac{Net \ revenue}{rac{1}{2}(Assets_T + Assets_{T-1})}$

Measures sales volume in relation to asset base

Microsoft's 2017 asset turnover: $\frac{89,950}{\frac{1}{2}(241,086+193,468))} = 41.4\%$

Current ratio

Current assets Current liabilities

- Measures a company's ability to pay current liabilities
- This should usually be >2

Quick ratio

$Cash + Short \ term \ investments + A/R$

Current liabilities

- A.k.a. acid-test ratio
- Measures a company's ability to pay current liabilities
 - Only factors in liquid current assets
- This should be > 1

Microsoft's 2017 quick ratio: $rac{7,663+125,318+19,792}{64,527}=2.37$

Debt ratio

Total liabilities Total assets

- A.k.a. Debt to assets ratio
- Measures a company's leverage
 - Leverage = how much the company is financed by debt
- Higher = more leverage = more debt financing

Microsoft's 2017 debt ratio: $\frac{168,692}{241,086} = 70.0\%$

Times-interest-earned ratio

Income from operations Interest expense

- Measures a company's ability to cover interest payments
- Higher is better, < 1 should cause some worry

Microsoft's 2017 times-interest-earned ratio: $\tfrac{22,326}{2,222}$ = 10.05

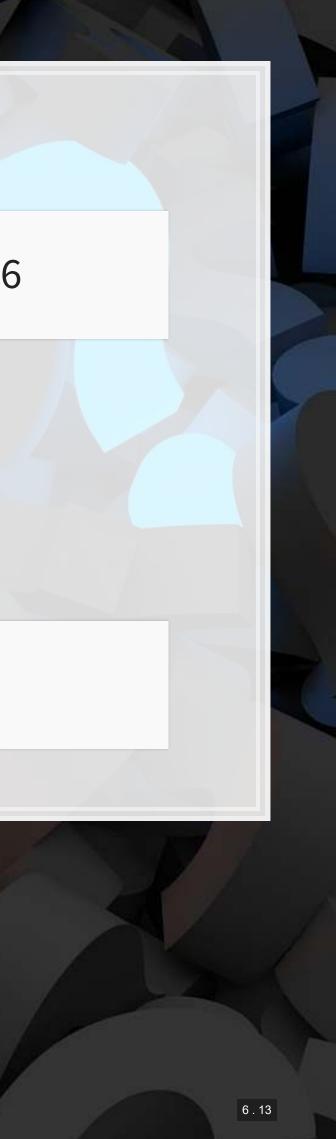

Practice

Calculate the following ratios for Microsoft in 2016

- Payable outstanding period
- Quick ratio
- Debt ratio
- Times-interest-earned ratio

Extra info: Microsoft's A/P in 2015 was \$6,591M

Solution

- Payable payment period (76.1 days in 2017)
 - $365/\frac{32,780}{\frac{1}{2}(6,898+6,591)} = 75.1 \, days$
- Quick ratio (2.37 in 2017)6 510+106 730+18 277
 - $rac{6,510+106,730+18,277}{59,357}=2.22$
- Debt ratio (70.0% in 2017)

$$\frac{121,471}{193,468} = 62.8\%$$

Times-interest-earned ratio (10.5 in 2017)
 20.182

$$-\frac{20,182}{1,243} = 16.2$$

Income statement ratios

Profit Margin

Profit Revenue

- Gross profit margin tells you about the company's selling margins
- Operating profit margin tells you about its operating efficiency
- Net profit margin tells you about its overall profitability

Microsoft's 2017 gross profit margin: $\frac{55,689}{89,950} = 61.9\%$

Microsoft's 2017 operating profit margin: $rac{22,326}{89,950}=24.8\%$

Microsoft's 2017 net profit margin: $\frac{21,204}{89,950} = 23.6\%$

Return on assets (ROA)

Net income

 $\frac{1}{2}(Assets_T + Assets_{T-1})$

- Measures overall profitability based on the company's size
- Very common measure in practice
- Higher is better

Microsoft's 2017 ROA:
$$rac{21,204}{rac{1}{2}(241,086+193,468))}=9.76\%$$

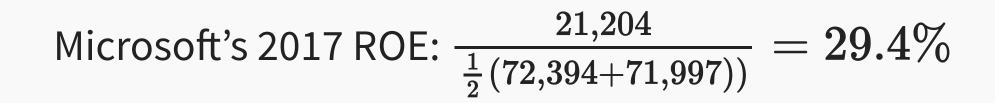

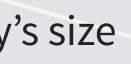

Return on equity (ROE)

Net income

 $\frac{1}{2}(Equity_T + Equity_{T-1})$

- Measures overall profitability based on the company's size
 - Stockholder focussed
- Very common measure in practice
- Higher is better

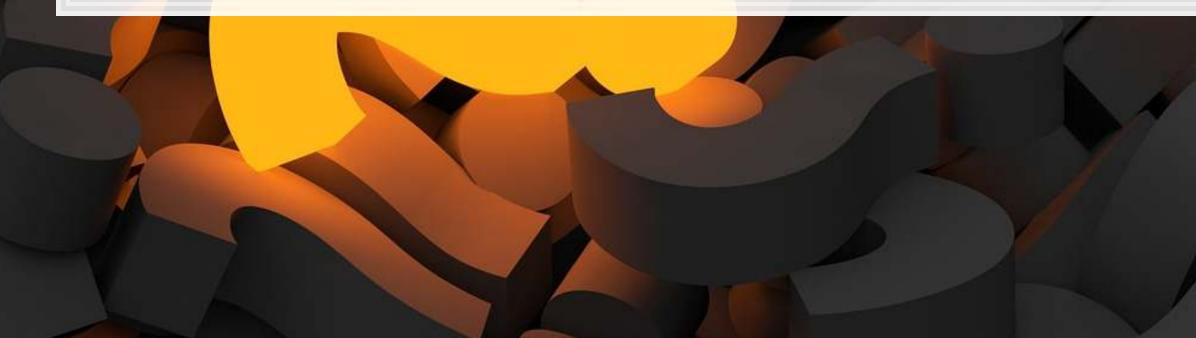

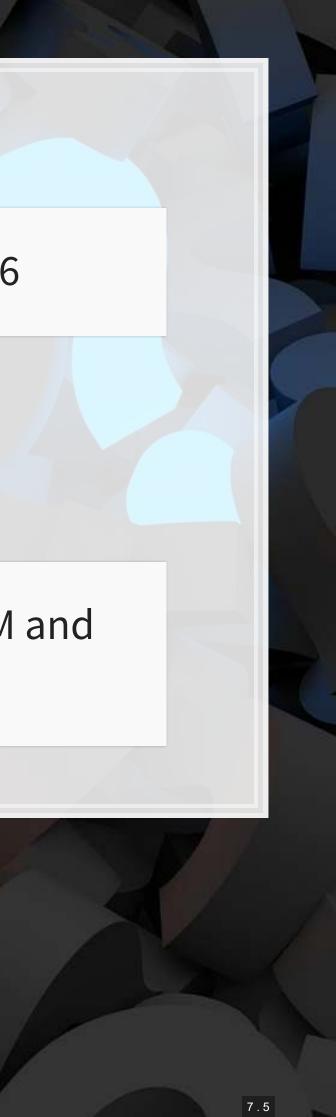

Practice

Calculate the following ratios for Microsoft in 2016

- Net profit margin
- Return on assets (ROA)
- Return on equity (ROE)

Extra info: Microsoft's 2015 total assets was \$176,223M and Microsoft's 2015 total equity was \$80,083M

Solution

Net profit margin (23.6% in 2017) $\frac{16,798}{85,320} = 19.7\%$ ROA (9.76% in 2017) $\frac{16,798}{\frac{1}{2}(193,468+176,223)} = 9.09\%$ ROE (29.4% in 2017) $\frac{16,798}{\frac{1}{2}(71,997+80,083)} = 22.1\%$

Equity ratios

Earnings per share (EPS)

Net income – Dividends on pref. shares

 $\frac{1}{2}(\#Shares_T + \#Shares_{T-1})$

- Measures the amount of profit tied to each share of stock
- Very common measure in practice
- Assume shares in year T and T-1 are the same if not stated
- Very easily manipulated

Microsoft's 2017 EPS: $\frac{21,204-0}{\frac{1}{2}(7,708+7,808))} = \$2.73/share$

Price/earnings ratio (P/E ratio)

 ${Stock\ price\over EPS}$

- A measure of if a stock is overpriced
- 6 to 8 is common, 20+ is common for tech firms
 - Higher = overpriced
 - Lower = underpriced
- Very common measure in practice
- Very easily manipulated, since EPS is easily manipulated

Microsoft's 2017 P/E ratio: $rac{68.93}{2.73}=25.2$

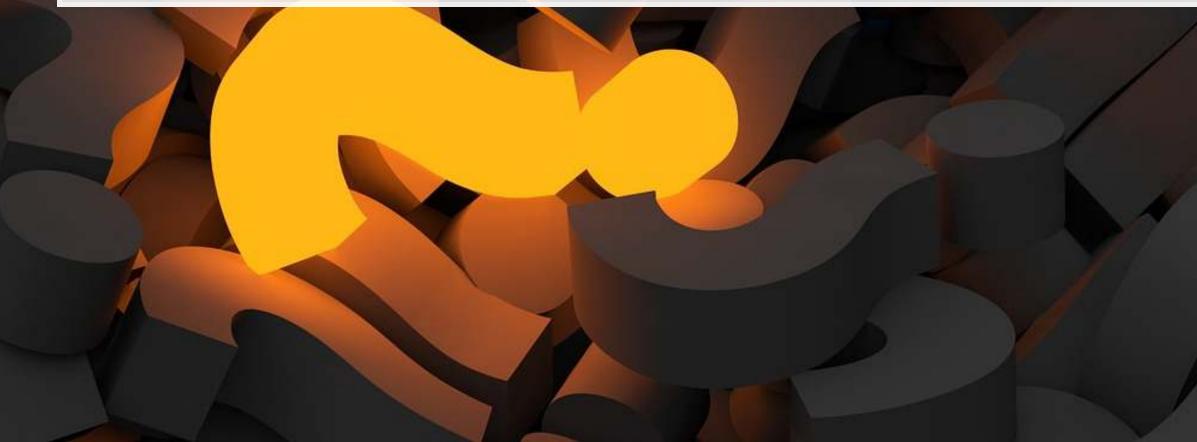

Practice

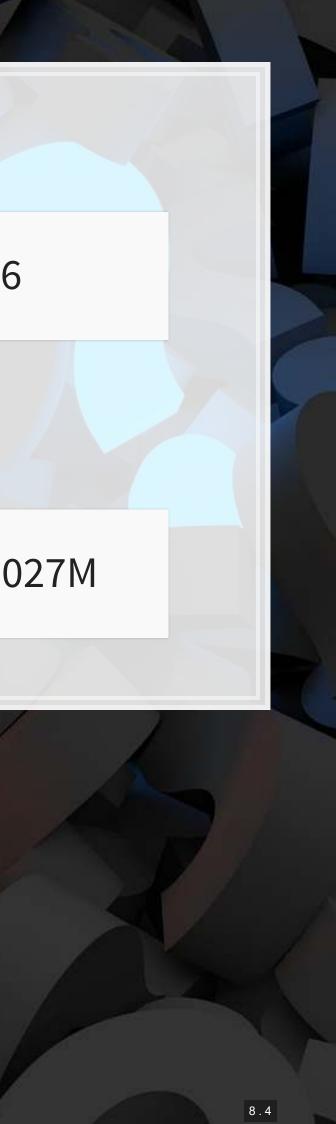

Calculate the following ratios for Microsoft in 2016

EPS

P/E Ratio

Extra info: Microsoft's 2015 outstanding shares was 8,027M

$$\frac{51.17}{2.12} = 24.1$$

Equations

Balance sheet ratio equations

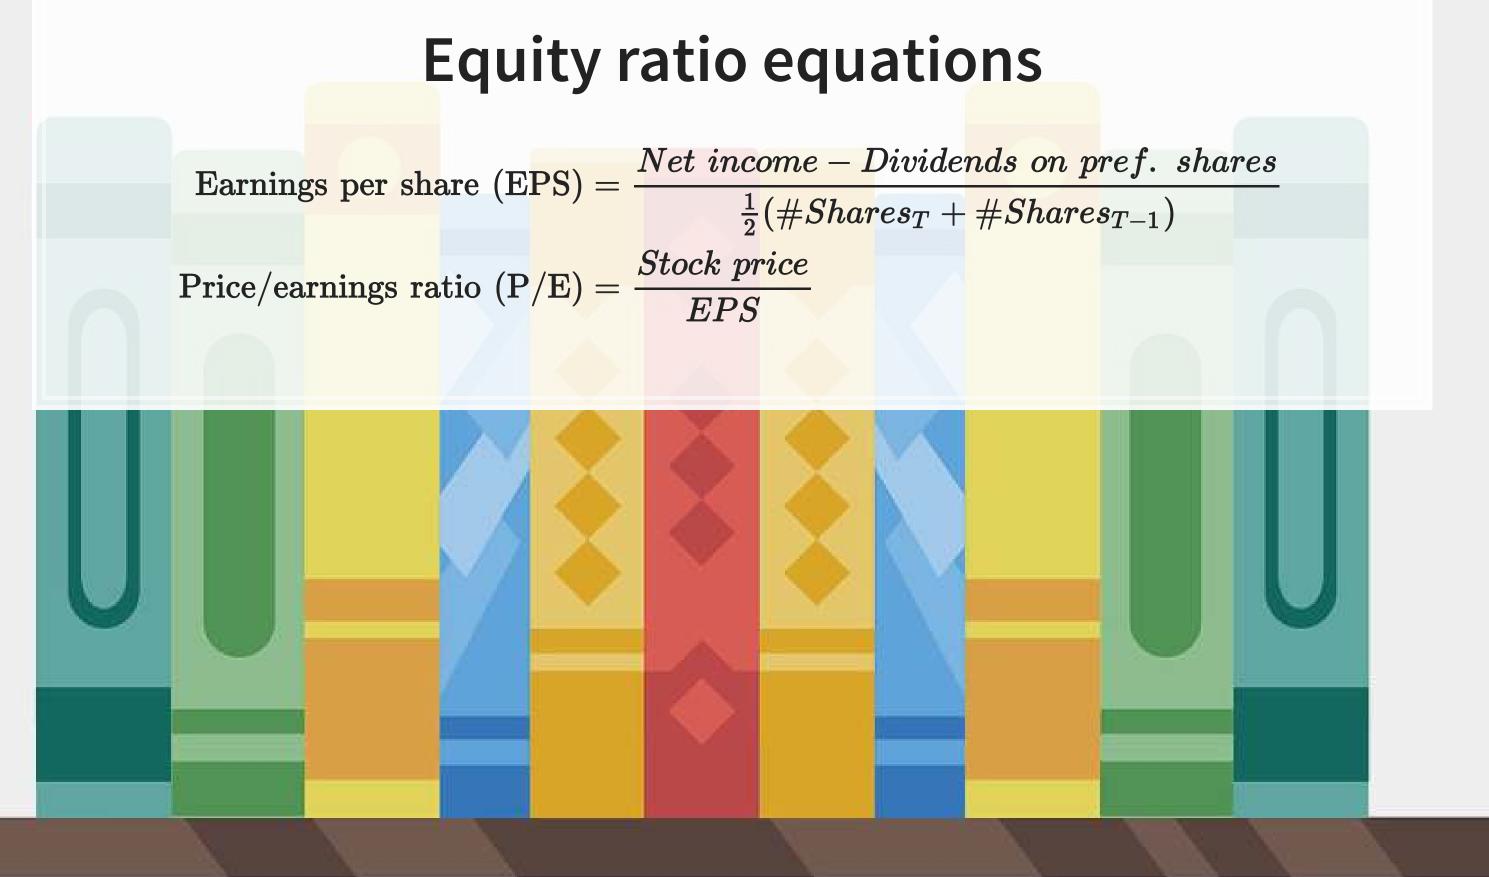

$$\begin{aligned} \text{Inventory turnover} &= \frac{COGS}{\frac{1}{2}(Inventory_T + Inventory_{T-1})} \\ \text{A/R turnover} &= \frac{Revenue}{\frac{1}{2}(A/R_T + A/R_{T-1})} \\ \text{A/P turnover} &= \frac{COGS}{\frac{1}{2}(A/P_T + A/P_{T-1})} \\ \text{Cash conversion cyle} &= \frac{365}{Inv. turnover} + \frac{365}{A/R turnover} - \frac{A/P}{A/P} \\ \text{Asset turnover} &= \frac{Net \ revenue}{\frac{1}{2}(Assets_T + Assets_{T-1})} \\ \text{Current ratio} &= \frac{Current \ assets}{Current \ liabilities} \\ \text{Quick ratio} &= \frac{Cash + Short \ term \ investments + A/R}{Current \ liabilities} \\ \text{Debt ratio} &= \frac{Total \ liabilities}{Total \ assets} \\ \text{Times-interest-earned} &= \frac{Income \ from \ operations}{Interest \ expense} \end{aligned}$$

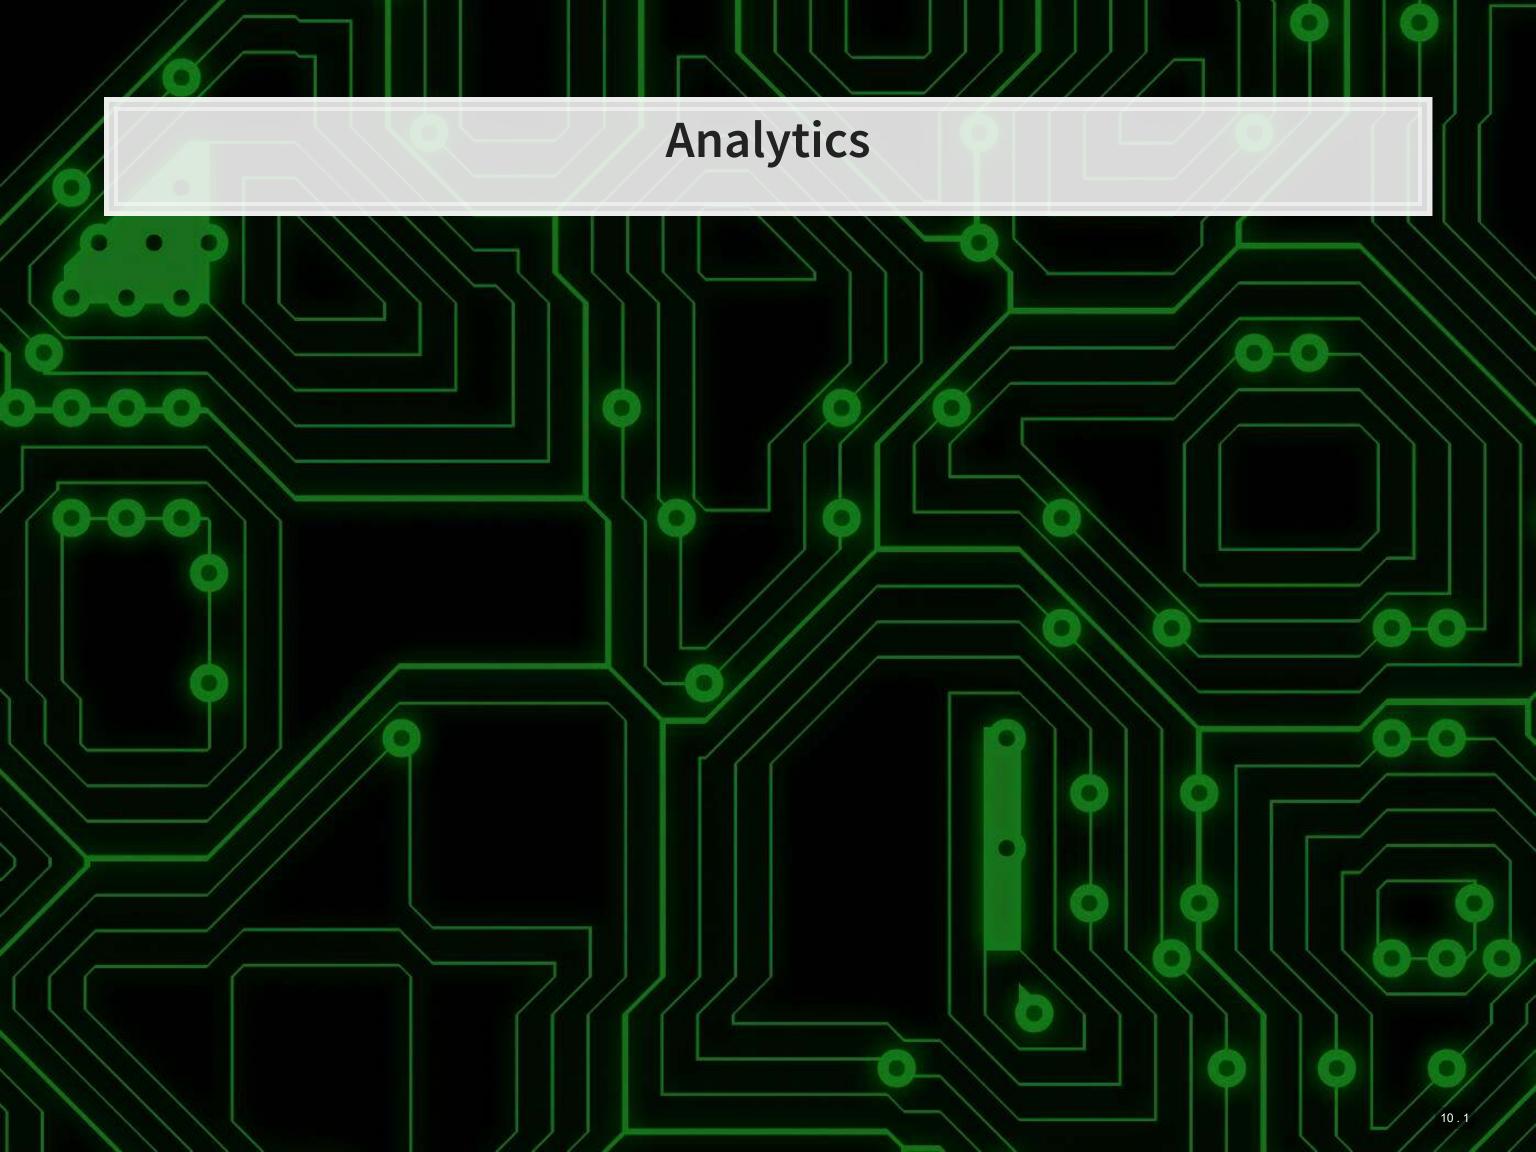

Income statement ratio equations

 $\begin{array}{l} \mbox{Gross (profit) margin} = \displaystyle \frac{Gross \ profit}{Revenue} \\ \mbox{Operating profit margin} = \displaystyle \frac{Operating \ profit}{Revenue} \\ \mbox{Net profit margin} = \displaystyle \frac{Net \ income}{Revenue} \\ \mbox{Return on assets (ROA)} = \displaystyle \frac{Net \ income}{\frac{1}{2}(Assets_T + Assets_{T-1})} \\ \mbox{Return on equity (ROE)} = \displaystyle \frac{Net \ income}{\frac{1}{2}(Equity_T + Equity_{T-1})} \end{array}$

Background

This is a quick preview of a module called "Forecasting" and Forensic Analytics," part of the Analytics major in SOA

You don't need to know this for this class, but the techniques covered here are becoming more and more important

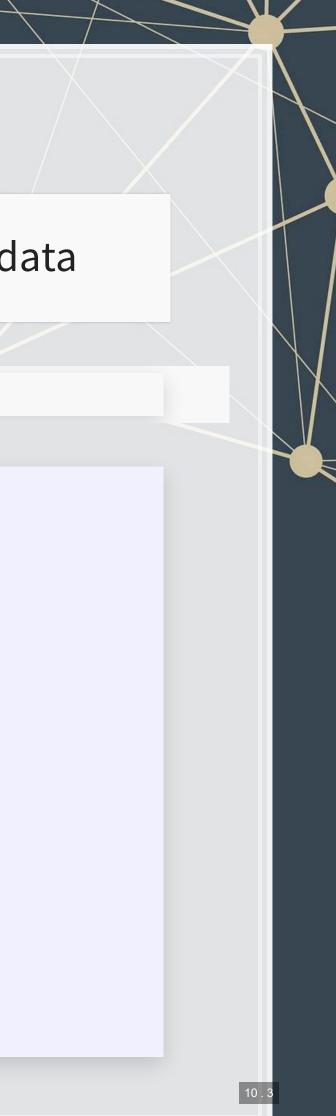

10.2

Revenue prediction

Predicting ROA for tech companies using prior year data
